# Employment, earnings and hours

In this issue:

1. Sampling frame improvements continue - see highlights section for details.
2. Employment estimates from the Labour Force Survey and the Survey of Employment, payrolls and hours.

April 1987

# Emploi, gains et durée du travail

Dans ce numéro:

1. Améliorations à la base de sondage continuées - voir la section des faits saillants pour les détails.
2. Estimations de l'emploi tirées de l'enquête sur la population active et de l'enquête sur l'emploi, la rémunération et les heures de travail.

Avril 1987

Statistics Canada Statistique Canada

## Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

## How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Employment, earnings and hours,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 991-4090) or to the Statistics Canada reference centre in:

| | | | |
|---|---|---|---|
| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |
| Halifax | (426-5331) | Winnipeg | (983-4020) |
| Montréal | (283-5725) | Regina | (780-5405) |

## Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

## Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Emploi, gains et durée du travail,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 991-4090) ou au centre de consultation de Statistique Canada à:

| | | | |
|---|---|---|---|
| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |

## Symbols

The following standard symbols are used in Statistics Canada publications:

.. figures not available.

... figures not appropriate or not applicable.

- nil or zero.

-- amount too small to be expressed.

p preliminary figures.

r revised figures.

x confidential to meet secrecy requirements of the Statistics Act.

### Note on CANSIM

Some of the data published in Employment, Earnings and Hours (Catalogue 72-002) are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. Data for urban areas are also available on CANSIM. Users interested in accessing data via CANSIM should contact one of Statistics Canada's regional centres at the numbers listed on the inside front cover of this publication or contact CANSIM directly at (613)991-1150.

## Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

.. nombres indisponibles.

... n'ayant pas lieu de figurer.

- néant ou zéro.

-- nombres infimes.

p nombres provisoires.

r nombres rectifiés.

x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

### Note concernant CANSIM

Quelques données publiées dans l'Emploi, gains et durée du travail (n° 72-002 au catalogue) peuvent être obtenues sous forme lisible par machine de CANSIM (Système Canadien d'information socio-économique). Les séries historiques sont généralement plus longues sur CANSIM. Les données pour les régions urbaines sont aussi disponibles sur CANSIM. Les utilisateurs voulant obtenir des chiffres par l'intermédiaire de CANSIM doivent contacter un des centres de consultation de Statistique Canada dont les numéros de téléphone se trouvent à l'endos du couvert de cette publication ou en communiquant directement avec CANSIM au (613)991-1150.

## HIGHLIGHTS

### Preliminary Estimates[1] (Data not seasonally adjusted) - April 1987

### Note to Users

Important changes to the survey of employment, payrolls and hours sampling frame have been phased-in over a four-month period which began with the reference month of January 1987. Major changes included improvements to the coverage of firms in the survey sample frame and a re-assignement of some establishments to more appropriate industry, geographic and/or employment size categories. These changes were designed to improve the accuracy and reliability of the estimates and were expected to result in higher estimates of employment.

For April, the introduction of these changes has resulted in an increase in the preliminary estimate of employment of about 0.7%. Increases for January were estimated at 1.4%, February increases were estimated at 2.3% and those for March at 1.3%, bringing the cumulative increase from January to April to approximately 5.7%. It is estimated that the sampling frame adjustments have had little impact on average weekly earnings.

Revised estimates for the first four months of 1987 and adjustment factors enabling linkage to 1986 and earlier data will be published with the May data to be released in late July. Users requiring more information should contact the Labour Division (613)991-4090.

Preliminary data for April 1987 showed an estimated 9,790,000 employees at the Canada industrial aggregate level[2], an increase of 179,000 ( + 1.9%) from the previous month (not adjusted for seasonal variation). Part of this increase, however, was due to the introduction of the improved sampling frame (see note above) leaving the underlying increase in employment similar to that usually observed at this time of the year.

Average weekly earnings for all employees were estimated at $438.27 for April, little changed from March and 2.3% above the level of April 1986 (not adjusted for inflation).

## FAITS SAILLANTS

### Estimations préliminaires[1] (données non désaisonnalisées) - avril 1987

### Avis aux utilisateurs

Les changements importants apportés à l'Enquête sur l'emploi, la rémunération et les heures de travail se poursuivent de façon graduelle sur une période de quatre mois qui a débuté avec le mois de référence de janvier 1987. Les changements majeurs comprennent des améliorations au champ d'enquête qui amèneront une base de sondage plus complète et un reclassement de certains établissements à des catégories plus appropriées au niveau de l'activité économique, du lieu géographique ou de la taille d'emploi. Ces changements sont destinés à améliorer la précision et la fiabilité des estimations. Il est anticipé que ces changements mèneront à des estimations d'emploi plus élevées.

Pour avril 1987, l'introduction de ces changements a entraîné une augmentation de l'emploi estimatif préliminaire d'environ 0.7%. L'augmentation était estimée à 1.4% en janvier, à 2.3% en février et à 1.3% en mars, amenant ainsi un gain cumulatif de 5.7% entre janvier et avril. Les ajustements apportés à la base de sondage ont peu d'impacts sur les estimations de la rémunération hebdomadaire moyenne.

Des estimations révisées pour les quatre premiers mois de 1987 ainsi que des facteurs d'ajustement permettant le raccordement aux données de 1986 et des années antérieures seront publiées avec les données de mai. Ces données seront disponibles vers la fin de juillet. Les utilisateurs qui ont besoin de plus de renseignements peuvent contacter la Division du travail au (613)991-4090.

Selon les données préliminaires non désaisonnalisées, le nombre de salariés pour l'ensemble des activités économiques[2] au Canada a atteint 9,790,000 en avril 1987, en hausse de 179,000 ( + 1.9%) par rapport au mois précédent. Cependant, précisons qu'une partie de cette augmentation était due aux améliorations apportées à la base de sondage (voir la note ci-dessus) de l'Enquête sur l'emploi, la rémunération et les heures de travail, laissant une augmentation d'emploi semblable à celle observée pour ce temps de l'année.

En avril 1987, la rémunération hebdomadaire moyenne pour l'ensemble des salariés était estimée à $438.27, soit peu changée par rapport à mars et 2.3% supérieure à celle du mois d'avril 1986 (non dégonflée par rapport à l'inflation).

## Employment

Estimated employment in April in the goods-producing industries was 3.0% higher than in March. Almost half of this increase was due to the sampling frame changes, leaving underlying employment slightly lower than usual for this time of the year. The number of employees in the service-producing industries increased by 1.5% between March and April, with about one-third of this increase due to the sampling frame changes. This leaves the underlying increase in employment in the service-producing industries similar to that observed in previous years.

The total number of employees at the Canada industrial aggregate level increased by about 733,000 ( + 8.1%) from April 1986. It is estimated that about three-quarters of this increase was due to the cumulative impact of changes made to the sampling frame from January to April 1987. The year-to-year growth rates in the goods-producing industries and service-producing industries were also higher than in the previous months.

Employment estimates in all provinces were affected by changes made to the sampling frame in April 1987. Estimated employment was higher than usual for this time of year in Prince Edward Island, Nova Scotia and Manitoba. The year-to-year growth rates in April were higher than in recent months in all provinces except Newfoundland, New Brunswick and Quebec.

## Earnings

Average weekly earnings for all employees in the goods-producing industries remained virtually unchanged between March and April 1987. Average weekly earnings were higher than usual for this time of year in mines, quarries and oil wells. In the service-producing industries, average weekly earnings were virtually unchanged from March. Average weekly earnings were lower than usual in trade.

Compared to April 1986, total average weekly earnings increased by $10.04, bringing the yearly growth rate to 2.3%. Average weekly earnings in the goods-producing industries rose by 3.3% from a year earlier, the highest yearly growth rate since February 1986. The year-to-year growth rate in the service-producing industries was 1.9%. Yearly growth rates were lower than in recent months in transportation, communication and other utilities and in trade.

At the provincial level, average weekly earnings increased between March and April in New Brunswick and Alberta at a time of year when a decrease or little change is usually observed. The yearly rates of changed in average weekly earnings were higher than in recent months in New Brunswick, Saskatchewan, Alberta and British Columbia.

## Emploi

En avril 1987, l'estimation du nombre de salariés de la branche productrice de biens était 3.0% supérieure à celle de mars. Près de la moitié de cette augmentation était due aux changements à la base de sondage, laissant le niveau de l'emploi légèrement plus faible qu'à l'ordinaire pour cette période de l'année. Le nombre de salariés de la branche productrice de services a augmenté de 1.5% entre mars et avril, dont un tiers de cette augmentation relève des changements à la base de sondage. Ceci laisse une augmentation dans l'emploi dans la branche productrice de services semblable à celle observée pour ce temps de l'année.

En regard d'avril 1986, l'estimation du nombre de salariés au niveau de l'ensemble des activités économiques au Canada montrait une augmentation de 733,000 ( + 8.1%). Le trois quarts de cette augmentation est attribuable à l'impact cumulatif des changements apportés à la base de sondage de janvier à avril 1987. Les taux de croissance annuels des branches productrices de biens et de services étaient plus élevés que pour les mois prédécents.

En avril, l'emploi estimatif par province a été affecté par les changements à la base de sondage. Une augmentation de l'emploi plus forte que d'habitude pour cette période de l'année a été enregistrée à l'Île-du-Prince-Édouard, en Nouvelle-Écosse et au Manitoba. Les taux de croissance annuels pour avril étaient plus hauts que dans les derniers mois et ce dans toutes les provinces à l'exception de Terre-Neuve, du Nouveau-Brunswick et du Québec.

## Rémunération

La rémunération hebdomadaire moyenne pour l'ensemble des salariés des industries productrices de biens est demeurée inchangée entre mars et avril. La rémunération hebdomadaire moyenne était plus forte que d'habitude dans les mines, carrières et puits de pétrole. Dans la branche productrice de services, la rémunération hebdomadaire moyenne est demeurée pratiquement inchangée par rapport à mars. La rémunération hebdomadaire moyenne était plus basse que d'habitude dans le commerce.

Par rapport à avril 1986, la rémunération hebdomadaire moyenne montrait une augmentation de $10.04 amenant le taux de croissance annuelle à 2.3%. La rémunération hebdomadaire moyenne de la branche productrice de biens augmentait de 3.3% par rapport à avril de l'an dernier. Ce taux de croissance est le plus élevé depuis février 1986. Le taux de variation annuel pour la branche productrice de services était de 1.9%. Les industries des transports, communications et autres services publics et du commerce enregistraient des taux de croissance annuels plus bas que dans les derniers mois.

Au niveau provincial, la rémunération hebdomadaire moyenne a augmenté entre mars et avril au Nouveau-Brunswick et en Alberta à un temps de l'année où l'on observe généralement une diminution ou peu de changements. Les taux de variation annuels de la rémunération hebdomadaire moyenne étaient plus élevés que dans les derniers mois au Nouveau-Brunswick, en Saskatchewan, en Alberta et en Colombie-Britannique.

## Hours and Houly Earnings

At the Canada industrial aggregate level, the average weekly hours for full-time and part-time employees paid by the hour (who account for approximately 47% of industrial aggregate employment) were estimated at 31.6 hours in April, little changed from the previous month. Average weekly hours were estimated at 38.7 hours in the goods-producing industries and 28.0 hours in the service-producing industries.

Average hourly earnings of employees paid by the hour, estimated at $10.95 in April 1987, remained virtually unchanged from March. Average hourly earnings in March were estimated at $12.88 in the goods-producing industries and $9.57 in the service-producing industries.

[1] See note on "Statistical presentation" under "Concepts and Methods" at the back of this publication.

[2] The industrial aggregate is the sum of all industries with the exception of agriculture; fishing and trapping; religious organizations; privae households and military personnel.

## Heures et rémunération horaire

Au niveau de l'ensemble des activités économiques au Canada, les heures hebdomadaires moyennes des salariés à temps plein et à temps partiel rémunérés à l'heure (ceux-ci représentent environ 47% des salariés de l'ensemble des activités économiques) étaient estimées à 31.6 heures en avril 1987, soit peu changées par rapport au mois précédent. Selon les estimations, le nombre d'heures hebdomadaires moyennes atteignait 38.7 heures dans la branche productrice de biens et 28.0 heures dans la branche productrice de services.

En avril 1987, la rémunération horaire moyenne des salariés rémunérés à l'heure était estimée à $10.95, soit peu changée par rapport à mars. Elle était estimée à $12.88 dans la branche productrice de biens et à $9.57 dans la branche productrice de services.

[1] Voir la partie "Présentation statistique" sous la rubrique "concepts et méthodes", à la fin de cette publication.

[2] L'ensemble des activités économiques est la somme de toutes les industries à l'exception de l'agriculture, la pêche et le piégeage, les organismes religieux, les ménages privés et les services de défense.

## NOTES TO USERS

### 1. SAMPLE SIZE INCREASE IN MANUFACTURING INDUSTRIES

The sample size of the Survey of Employment, Payrolls and Hours was increased by 2,000 establishments in the manufacturing industry in order to improve the quality of the estimates at the detailed industry level. Commencing with the data for January, 1986, all manufacturing firms with 50 to 199 employees were included in the sample with certainty. These firms had previously been surveyed on a sample basis. Estimates originally published for January and February, 1986, did not include these additional units so that the impact on the manufacturing data and the Industrial Aggregate could be assessed prior to publication. Data for January and February, revised to reflect this change, were first presented in the March 1986 issue of this publication.

### 2. INDUSTRIAL COMPOSITE

Note that the publication of the Estimates of Average Weekly Earnings for "Industrial Composite" was terminated with the December 1985 estimates.

### 3. URBAN AREAS

Effective with **June 1985,** data for urban areas have been removed from the publication and the remaining statistical tables have been re-numbered as a result of the changes. (See the June 1985 issue for the conversion from the old to the new table numbers).

Data for urban areas will continue to be made available to users on request.

### 4. REVISIONS TO HISTORICAL DATA

**1984**

There has been a revision to the data published monthly in the January to July 1984 issues of Catalogue 72-002 for the industries listed below. The revised series appear in the September 1984 issue. All data variables for the following series at the Canada, Provinces and Territories level may be affected:

1. Total Number of Employees - All Survey Units
2. Salaried Employees - All Survey Units
3. Total Number of Employees - Take-All Units
4. Salaried Employees - Take-All Units

## AVIS AUX UTILISATEURS

### 1. AUGMENTATION DE LA TAILLE DE L'ÉCHANTILLON DANS LES INDUSTRIES MANUFACTURIÈRES

Dans le but d'améliorer la qualité des séries publiées par l'enquête sur l'emploi, la rémunération et les heures de travail sur les industries manufacturières, 2,000 entreprises ont été ajoutées à l'échantillon de ce secteur. À partir du mois de référence de janvier 1986, toutes les entreprises manufacturières ayant 50 à 199 salariés sont incluses dans l'échantillon. Auparavant, seul un échantillon de ces entreprises était enquêté. Les chiffres originalement publiés pour les mois de janvier et de février 1986 n'incluaient pas ces unités additionnelles. Le but de ce délai était de déterminer l'impact sur les estimations des industries manufacturières et de l'ensemble des activités économiques. Il est important de noter que les chiffres de janvier et février, révisés pour refléter le changement, ont été publiés dans le numéro de mars 1986 de ce catalogue.

### 2. ENSEMBLE DES INDUSTRIES

Veuillez noter que les Estimations de la rémunération hebdomadaire moyenne pour l'"ensemble des industries" ont cessé d'être publiées avec les estimations révisées de décembre, 1985.

### 3. RÉGIONS URBAINES

À partir de **juin 1985,** les données pour les régions urbaines ont été supprimées et les tableaux qui font encore partie de cette publication ont été rénumérotés. (Voir la publication de juin 1985, pour la conversion des anciens aux nouveaux numércs de tableaux).

Les données pour les régions urbaines sont toujours disponibles sur demande.

### 4. RÉVISIONS AUX DONNÉES HISTORIQUES

**1984**

Des révisions ont été apportées aux chiffres publiés dans le catalogue mensuel numéro 72-002 pour les mois de janvier à juillet 1984, pour les industries mentionnées ci-dessous. Les séries révisées figurent dans le catalogue du mois de septembre 1984. Toutes les variables pour les séries qui suivent aux niveaux du Canada, provinces et territoires peuvent être affectées:

1. Nombre total de salariés - Ensemble des unités
2. Employés - Ensemble des unités
3. Nombre total de salariés - Unités à tirage complet
4. Employés - Unités à tirage complet

For additional information on any of the above issues, or on the use or application of data series, please contact Renée Arsenault of the Labour Division at (613) 991-4090.

Pour de plus amples renseignements sur les sujets précités, ou sur l'utilisation et l'application de séries alternatives, communiquer avec Renée Arsenault de la Division du travail à (613) 991-4090.

## EMPLOYMENT ESTIMATES FROM THE LABOUR FORCE SURVEY AND THE SURVEY OF EMPLOYMENT, PAYROLLS AND HOURS

By Henry Pold*

### INTRODUCTION

Because labour is central to the production of goods and services, statistics on the supply and utilization of labour are essential for measuring the performance of the economy. A complete picture of the labour market includes information from both individuals and employers. Individuals are surveyed by the monthly Labour Force Survey (LFS). The LFS provides comprehensive data on the labour force (the employed and the unemployed) by such characteristics as age, sex, family relationship, marital status, occupation and industry. The survey also provides data on the characteristics and past work experience of those not currently in the labour force.

Employers (businesses, governments, institutions and other organizations, collectively referred to as "establishments") are covered by the monthly Survey of Employment, Payrolls and Hours (SEPH). SEPH is designed to provide detailed industry information on payroll employment,

* Henry Pold is an analyst with the Labour and Household Surveys Analysis Division (613) 991-4608.

## ESTIMATIONS DE L'EMPLOI TIRÉES DE L'ENQUÊTE SUR LA POPULATION ACTIVE ET DE L'ENQUÊTE SUR L'EMPLOI, LA RÉMUNÉRATION ET LES HEURES DE TRAVAIL

Par Henry Pold*

### INTRODUCTION

Puisque la main-d'oeuvre est essentielle à la production de biens et services, les statistiques sur l'offre et l'utilisation de la main-d'oeuvre sont nécessaires à l'étude de la performance de l'économie. Pour une image complète des rouages du marché du travail, il nous faut des renseignements de la part des particuliers ainsi que des employeurs. L'enquête sur la population active (EPA), menée tous les mois auprès des particuliers, fournit des données détaillées sur la population active (les personnes occupées et les chômeurs) selon certaines caractéristiques telles l'âge, le sexe, les liens entre les membres de la famille, l'état matrimonial, la profession et la branche d'activité. L'enquête fournit également des données sur les caractéristiques et l'expérience précédente de travail des personnes qui ne font pas présentement partie de la population active.

L'enquête sur l'emploi, la rémunération et les heures de travail (EERH) est effectuée tous les mois auprès des employeurs (ou ce que l'on appelle des "établissements", soit des entreprises, des administrations publiques, des institutions et autres organismes). L'EERH a été conçue afin de fournir des données

* Henry Pold est un analyste dans la Division de l'analyse des enquêtes sur le travail et les ménages (613) 991-4608.

average weekly earnings, average weekly hours and average hourly earnings.

précises sur l'emploi selon la branche d'activité à partir des listes de paye. De plus, elle renseigne sur la rémunération hebdomadaire moyenne, le nombre hebdomadaire moyen d'heures de travail et la rémunération horaire moyenne.

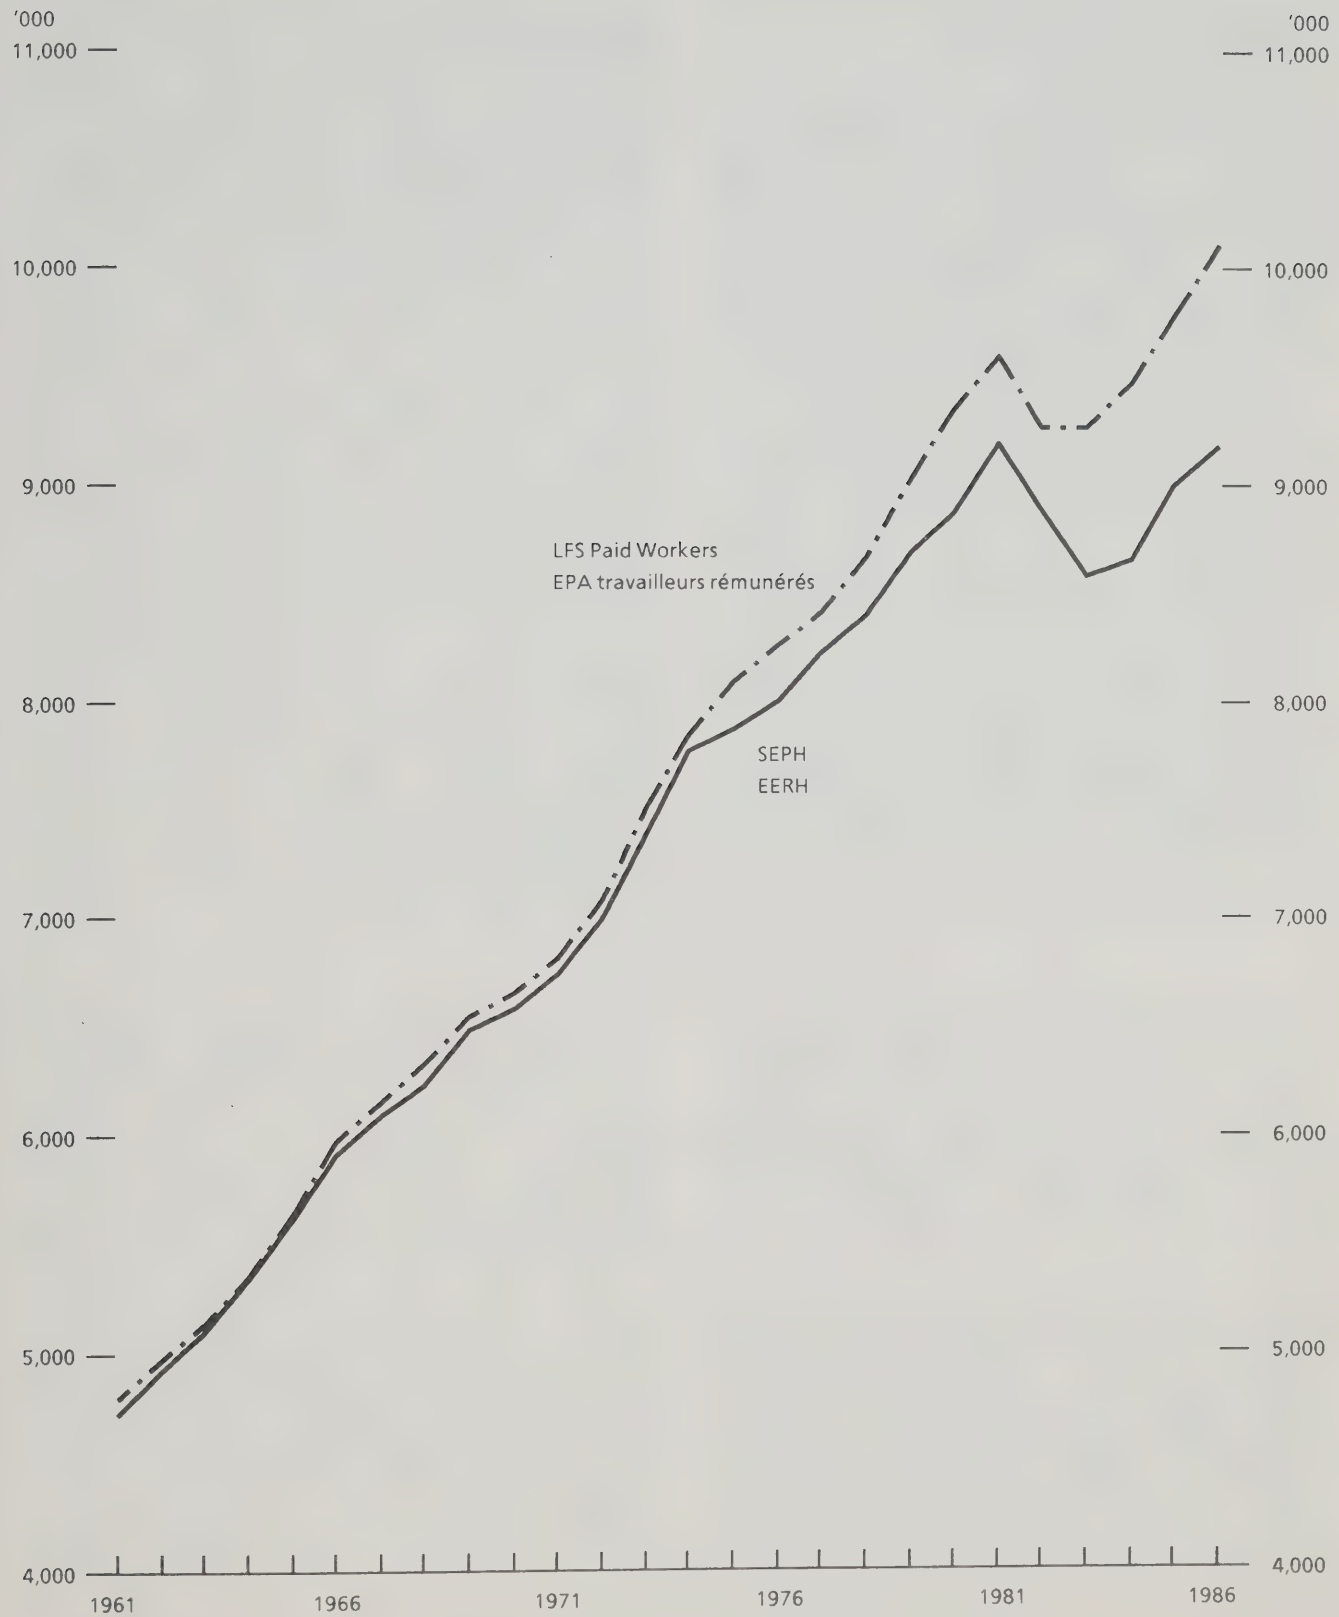
The two surveys complement one another, each providing data that the other cannot suitably supply. Population characteristics, for example, are readily obtained only from a household-based survey whereas detailed industrial and earnings data can best be derived from an establishment-based survey.

Les deux enquêtes se complètent l'une l'autre, chacune fournissant des données que l'autre ne peut procurer adéquatement. Seule une enquête-ménage peut recueillir facilement des renseignements sur les caractéristiques de la population, tandis qu'une enquête auprès des établissements est la meilleure façon de recueillir les données sur le revenu et d'autres renseignements selon un classement industriel détaillé.

Each month Statistics Canada generates two estimates of employment. The LFS estimates of total employment are significantly higher than those from SEPH. For example, the January 1986 LFS estimate was 11,196,000, while the SEPH figure was 8,903,000 - a difference of over two million. In the summer the gap usually widens; in July 1986 the LFS estimate was 12,060,000 and the SEPH estimate was 9,218,000 - a gap of 2.8 million.

Chaque mois, Statistique Canada produit deux genres d'estimations de l'emploi. Les estimations de l'EPA sont beaucoup plus élevées que celles de l'EERH. Par exemple, l'estimation de l'emploi tirée de l'EPA de janvier 1986 était de 11,196,000 contre 8,903,000 pour l'EERH, ce qui représente une différence de plus de deux millions. Au cours de l'été, l'écart prend habituellement plus d'ampleur; en juillet 1986, l'estimation de l'EPA était de 12,060,000 et celle de l'EERH était de 9,218,000 - soit un écart de 2.8 millions.

Although the long-term trends tend to be similar, the two series do occasionally move in opposite directions. Several factors contribute to the LFS/SEPH gap and to its behaviour over time. Some of these factors can be readily quantified using the information collected by the two surveys. Other factors can only be approximated. And for a few factors, one can only speculate on their impact. The factors enumerated in this article are fairly comprehensive, but they are not necessarily exhaustive. For the readily quantifiable factors, estimates are given, but for the other factors, only the direction of their impact is discussed. The purpose of this paper is not to



Bien que les tendances à long terme soient généralement les mêmes, les deux séries divergent parfois. L'écart et son comportement dans le temps s'expliquent par plusieurs facteurs. Certains de ces facteurs sont facilement quantifiés grâce aux données des deux enquêtes. Pour certains autres, on peut seulement offrir des approximations de leur amplitude. Dans le cas de quelques facteurs, on ne peut que spéculer sur leurs répercussions. Bien que les facteurs du présent rapport ne soient pas nécessairement exhaustifs, ils expliquent, en grande mesure l'écart observé. Sont présentées, les estimations des facteurs que l'on peut facilement évaluer, mais en ce qui concerne les autres, on traite seulement de la

Graphique - 1

reconcile the two series but to identify the sources of difference.

## COVERAGE DIFFERENCES

One obvious difference between the two surveys is the type of employment covered - the LFS estimate includes the self-employed and unpaid family workers assisting in the operation of a family farm or business. SEPH excludes such people and counts only "employees", defined as any persons drawing pay for services rendered or for paid absence, and for whom the employer is required to complete a Revenue Canada T-4 Supplementary Form (including directors, working owners and other officers of incorporated businesses). The equivalent group from the LFS is "paid workers", individuals receiving a wage, salary or remuneration in kind, plus self-employed persons with an incorporated business. The LFS estimate of paid workers was 10,025,000 in January 1986 and 10,895,000 in July 1986, reducing the LFS/SEPH gap to 1,121,000 and 1,677,000 in those months (Chart 2).

Next, the LFS covers four industries which are excluded from SEPH: agriculture, fishing and trapping, religious organizations and private households. Excluding paid workers in these four groups further reduces the gap to 856,000 and 1,324,000 in January and July.

And finally, SEPH covers the Yukon and Northwest Territories while the LFS does not. The SEPH estimates with the territories removed were 8,878,000 and 9,190,000 for January and July 1986 respectively. Having made these adjustments, the gap between the two surveys was 881,000

direction de leur effet. En effet, le but de cet article n'est pas de concilier les deux séries, mais plutôt d'identifier les sources de différence.

## DIFFÉRENCES RELATIVES AU CHAMP D'OBSERVATION

Il existe une différence manifeste entre les deux enquêtes. L'EPA englobe les travailleurs autonomes et les travailleurs familiaux non rémunérés qui participent à l'exploitation d'une entreprise ou d'une ferme familiale. Par contre, l'EERH exclut ces personnes et compte seulement les employés, c.-à-d. les personnes touchant une rémunération pour les services assurés ou pour un congé payé et pour qui l'employeur est tenu de remplir le formulaire supplémentaire T-4 de Revenu Canada (groupe qui englobe les directeurs, les propriétaires actifs et d'autres cadres des entreprises constituées en société). Le groupe équivalent de l'EPA, les "travailleurs rémunérés", sont ceux qui touchent un traitement ou salaire ou bien une rémunération en nature, ainsi que les travailleurs autonomes au sein d'une entreprise constituée en société. Selon l'EPA, le nombre de travailleurs rémunérés se situait à 10,025,000 en janvier 1986 et à 10,895,000 en juillet 1986. Ainsi, l'écart est réduit à 1,121,000 et à 1,677,000 pour ces deux mois (Graphique 2).

De plus, l'EPA porte sur quatre secteurs qui sont exclus de l'EERH: l'agriculture, la pêche et le piégeage, les organisations religieuses et les ménages privés. L'exclusion des travailleurs rémunérés de ces quatre groupes réduit davantage l'écart, qui se situe maintenant à 856,000 en janvier et à 1,324,000 en juillet.

Enfin, l'EERH couvre le Yukon et les Territoires de Nord-Ouest, ce qui n'est pas le cas pour l'EPA. Si l'on exclut les territoires, l'emploi selon l'EERH était de 8,878,000 en janvier et de 9,190,000 en juillet. Après ces rajustements, l'écart est de 881,000 pour janvier 1986 et de 1,351,000 pour

in January 1986 and 1,351,000 in July 1986 - less than half the original figure, but still substantial.

## CONCEPTUAL DIFFERENCES

Two conceptual differences have major, but opposite impacts on the gap. Persons with two jobs, known as multiple jobholders, are one source of difference. Only persons who are paid workers in both jobs affect the LFS/SEPH employment comparison. These persons are counted only once in the LFS, but they are counted separately at each of their jobs in SEPH.

Persons who have a job but are absent from work are also treated differently by the two surveys. Because SEPH data are obtained from company payrolls, only those absentees who are being paid (for example, persons on paid vacation or sick leave) are counted as employed. The LFS also includes paid absentees as employed, but in addition it counts persons who have a job, are not at work, and are not being paid (for example, most teachers on summer holidays, persons on strike or locked-out, some individuals receiving workers' compensation).

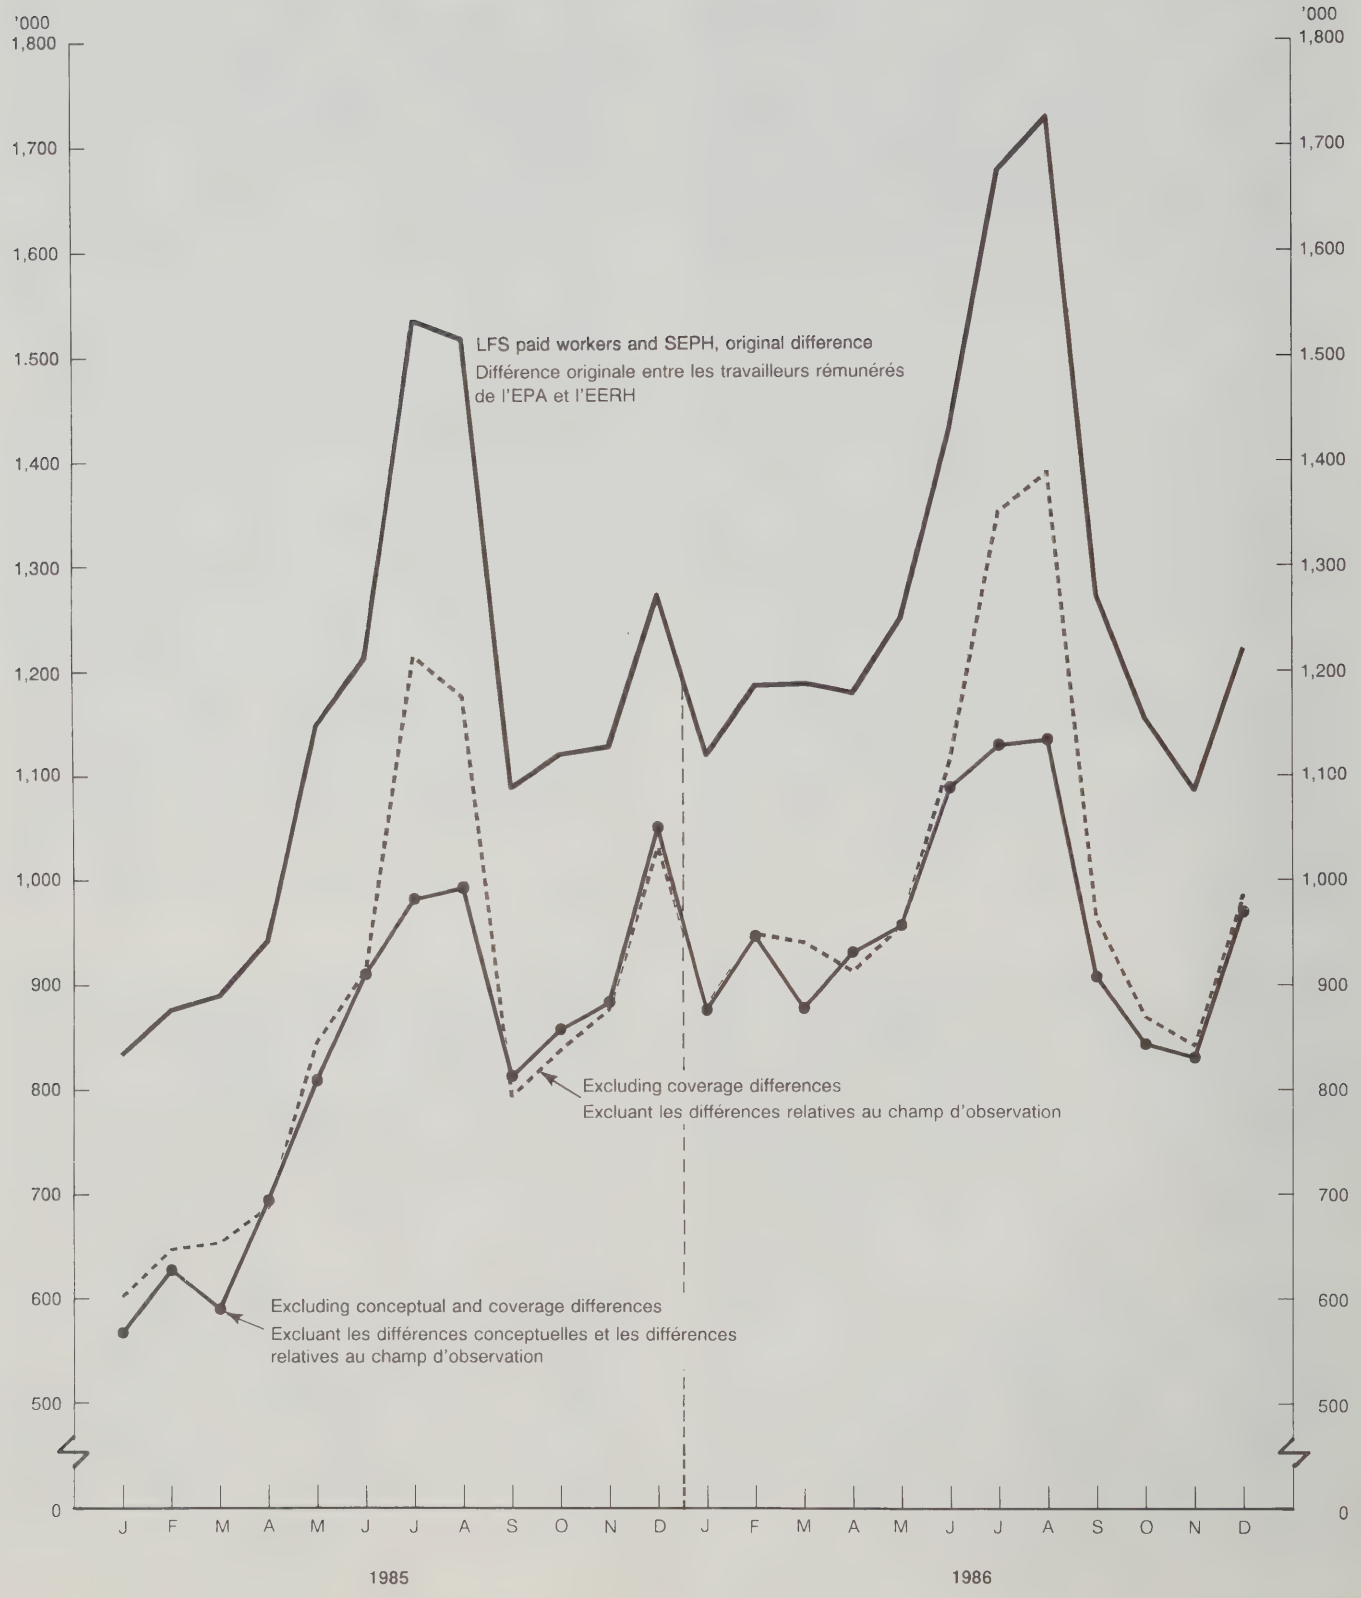
These conceptual differences have opposite impacts. Accounting for multiple jobholders widens the gap, but removing unpaid absentees from the LFS estimate narrows it. In most months these two factors are roughly equal, but in July and August the number of unpaid absentees almost doubles as people take their vacations. Compensating for these two factors should have only a slight impact on the gap, except during the summer when one would expect the gap to be reduced substantially. In fact the gap remains wider during the summer months, even after removing

juillet 1986, soit moins de la moitié du chiffre de départ, mais toutefois une différence importante.

## DIFFÉRENCES CONCEPTUELLES

Deux différences conceptuelles ont des effets majeurs mais opposés sur l'écart. Les personnes cumulant des emplois sont une source de différence. Seules les personnes qui sont des travailleurs rémunérés aux deux emplois nuisent à la comparaison des données sur l'emploi de l'EERH et celles de l'EPA. Dans l'EPA, ces personnes ne sont comptées qu'une fois, tandis que dans l'EERH, elles sont comptées à chacun de leurs emplois.

Les personnes qui ont un emploi mais qui sont absentes du travail, sont également traitées différemment par les deux enquêtes. Étant donné que l'EERH est axée sur les listes de paye, elle compte uniquement comme occupées les personnes absentes qui sont rémunérées; par exemple, les personnes en vacances payées ou en congé de maladie payé. L'EPA compte également comme occupées les personnes absentes rémunérées, mais en plus, elle compte les personnes qui sont absentes de leur emploi sans paye (par exemple, la plupart des enseignants en vacances d'été, les personnes en grève ou en lock-out et certaines qui touchent des indemnités d'accidents du travail).



Ces deux différences conceptuelles exercent des effets opposés sur l'écart des données. Si l'on tient compte des personnes cumulant des emplois, on élargit l'écart. Par contre, si l'on exclut de l'EPA les personnes absentes du travail sans rémunération, on réduit l'écart. Ces deux facteurs s'annulent plus ou moins sauf en juillet et août, lorsque les gens prennent leurs vacances: le nombre de personnes absentes sans rémunération est alors presque le double. Le rajustement en fonction de ces deux facteurs ne changerait guère l'écart, sauf en été, où il devrait en principe diminuer de façon notable. En fait, il reste

Chart – 2

## LFS – SEPH Differences, Canada, January 1985 to December 1986

Graphique – 2

## Différences entre l'EPA et l'EERH, Canada, janvier 1985 à décembre 1986

these two factors. (Reasons for this are discussed under operational factors.) In January 1986 the LFS estimate of multiple jobholders (where individuals were paid workers in both jobs) was 250,000, while the estimate of unpaid absentees was 254,000. In July 1986 the respective numbers were 276,000 and 498,000. After adding multiple jobholders and subtracting unpaid absentees, the gap was 878,000 for January and 1,130,000 for July.

## DIFFERENCES BY INDUSTRY

The LFS/SEPH gap varies by industry group as well. The community, business and personal services industries and the transportation, communications and other utilities industries show only small differences. In construction, mining and public administration, however, the differences are quite large. The variation by industry is at least partly a result of industry coding procedures. Although both surveys use the Standard Industrial Classification (SIC), the LFS cannot, because of its methodology, precisely identify establishments, the fundamental units to which SIC codes are attached. This problem can be especially troublesome in the case of large multi-establishment multi-industry businesses. Proxy reporting in the LFS can aggravate the situation if the respondent is unable to provide precise information about the nature of the business. The problem is further exacerbated by the use of different versions of the SIC; the LFS uses the 1980 version while SEPH uses the 1970 version.

large pendant les mois d'été, même si l'on tient compte de ces deux facteurs. (Les raisons sous-jacentes sont traitées sous la rubrique "différences relatives aux procédures d'enquête".) En janvier 1986, l'estimation de l'EPA des personnes cumulant deux emplois rémunérés était de 250,000 alors que l'estimation des personnes absentes sans rémunération était de 254,000. En juillet 1986, les chiffres respectifs étaient de 276,000 et de 498,000. En tenant compte des personnes cumulant des emplois et de celles absentes sans rémunération, on réduit à 878,000 l'écart de janvier et à 1,130,000 celui de juillet.

## DIFFÉRENCES SELON LA BRANCHE D'ACTIVITÉ

L'écart varie également d'une branche d'activité à l'autre. Le secteur des services socio-culturels, commerciaux et personnels et celui des transports, communications et autres services publics enregistrent de faibles différences. Par contre, dans les secteurs de la construction, de l'industrie minière et de l'administration publique, les différences sont assez importantes. La variation selon la branche d'activité est imputable en partie à la façon dont celles-ci sont codées. Pour les deux enquêtes, on emploie la Classification type des industries (CTI), mais la méthodologie de l'EPA ne permet pas d'identifier les établissements, c'est-à-dire les unités auxquelles se rapportent les codes de la CTI. Le problème peut être particulièrement épineux dans le cas des grandes entreprises à établissements et industries multiples. La déclaration par personne interposée dans le cadre de l'EPA peut aggraver davantage la situation si le répondant n'est pas en mesure de fournir des renseignements précis sur la nature de l'entreprise. L'utilisation de différentes versions de la CTI rend le problème encore plus exaspérant; l'EPA utilise la version de 1980 alors que l'EERH utilise la version de 1970.

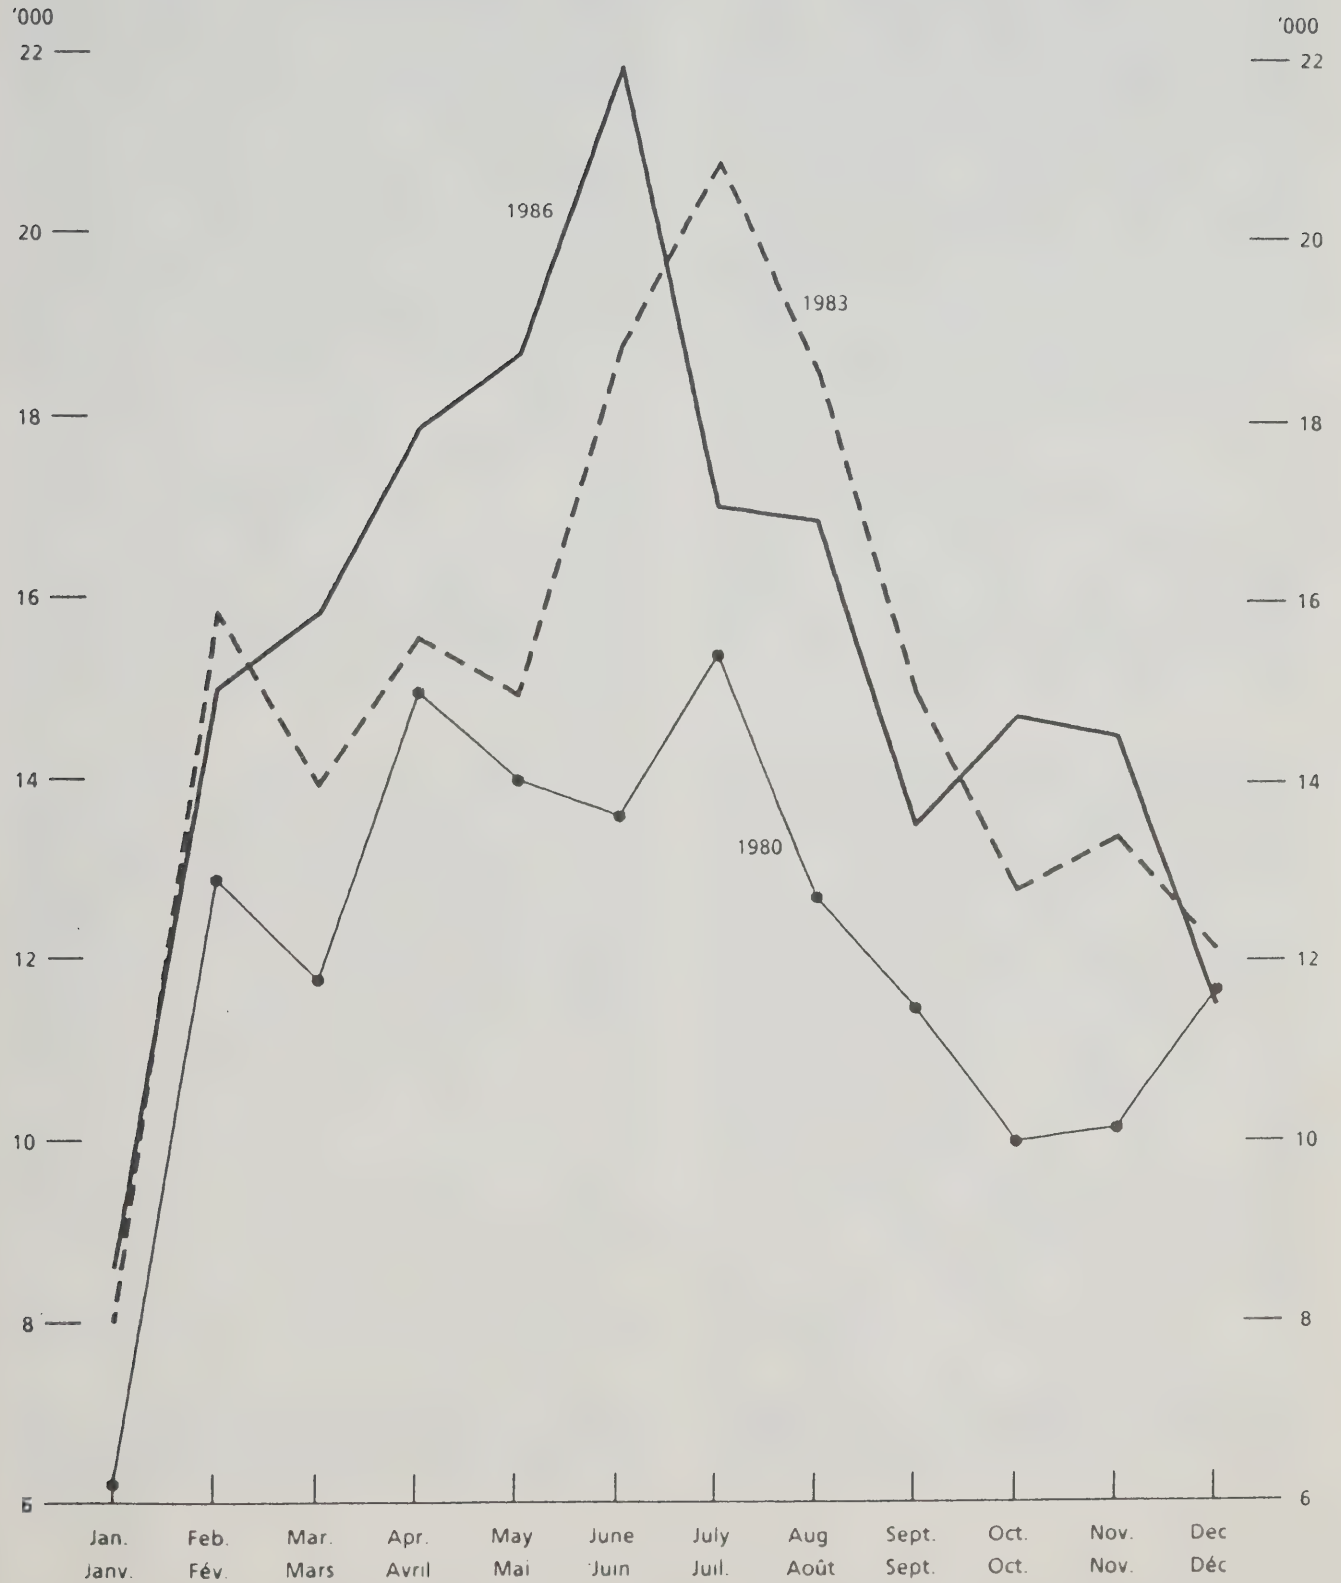
## DIFFERENCES DUE TO OPERATIONAL FACTORS

The gap between household and establishment employment data has existed in Canada for many years. (Similar gaps are found in corresponding surveys in other countries.) The task of interpreting the disparity over time and identifying its sources is complicated by changes in the surveys. For example, prior to 1975, the LFS paid worker estimate was between 1% and 2% above the establishment survey figure.[1] In 1975 the LFS questions and definitions were revised, and the gap widened to between 2% and 5%.[2] With the implementation of SEPH in 1983, the gap widened again, to about 9% (after all the readily quantifiable adjustments previously mentioned).

Differences in the operation of the two surveys can have an impact on the data. The collection techniques differ: the LFS interviews people at home, either face-to-face or by telephone, whereas SEPH mails questionnaires to the payroll office of employers. The LFS design starts with a listing of dwellings and samples from that. Dwellings are kept in sample for six months, and in any given month one sixth of the sample is replaced. SEPH, on the other hand, selects respondents from a universe of over 700,000 employers, divided into two main groups - the "take-all" and the "take-some". The take-all group consists of those firms or organizations that are always surveyed.[3] Units from the take-some group are selected on a probability basis and remain in sample for twelve months, with one twelfth of the sample being replaced each month.

## DIFFÉRENCES RELATIVES AUX PROCÉDURES D'ENQUÊTE

L'écart entre les données sur l'emploi recueillies auprès des ménages et celles des établissements existe au Canada depuis de nombreuses années. (Des différences analogues se retrouvent dans les enquêtes correspondantes d'autres pays.) Il est difficile d'interpréter l'évolution de la disparité ou d'en déterminer l'origine, en raison des modifications apportées aux procédures d'enquête. Par exemple, avant 1975, l'estimation de l'EPA pour les travailleurs rémunérés était de 1% à 2% supérieure au chiffre établi à partir de l'enquête auprès des établissements[1]. En 1975, on a révisé les questions et les définitions de l'EPA, ce qui a élargi l'écart, celui-ci se situant alors entre 2% et 5%[2]. Depuis la mise en oeuvre de l'EERH en 1983, l'écart est d'environ 9% (suite à tous les ajustements précités).



Si la mise en oeuvre des deux enquêtes comporte de nombreuses différences, cela peut avoir des répercussions sur les données. Les techniques de collecte diffèrent: pour l'EPA, on interroge les gens chez eux, soit en se rendant sur place soit par téléphone, tandis que pour l'EERH, on envoie des questionnaires au bureau de paye des employeurs. Le plan de sondage de l'EPA commence avec une liste de logements. Les logements font partie de l'échantillon pendant six mois, et on renouvelle un sixième de l'échantillon chaque mois. Par contre, dans le cas de l'EERH, les répondants sont choisis à partir d'un univers de plus de 700,000 employeurs regroupés en deux: un échantillon à tirage complet et un échantillon à tirage partiel. Le premier groupe comprend les entreprises et organismes qui sont toujours visés par l'enquête[3]. Les unités de l'échantillon à tirage partiel sont choisies sur une base de probabilité et restent dans l'échantillon pendant douze mois, le douzième de l'échantillon étant renouvelé chaque mois.

**New Payroll Deduction Accounts by Month, 1980, 1983 and 1986**

**Nouveaux comptes de retenue sur la paye, données mensuelles, 1980, 1983 et 1986**

Graphique - 3

Another factor that may affect the gap is SEPH's procedure for updating its establishment list. New firms are constantly being formed, but because of lags in getting them onto the Business Register, some businesses are missed. In an average month, Revenue Canada-Taxation issues 15,000 new payroll deduction numbers, which must be added to the Business Register.[4] During 1985 and 1986, the backlog of records awaiting classification averaged over 100,000 per month. (By April 1987 however, the backlog had been reduced to around 75,000.) Because these employers are not being surveyed, it is difficult to know how many employees they have. The numbers could however account for a significant fraction of the difference between LFS and SEPH employment estimates. Most of the new accounts are for new and small establishments. But if an existing firm adds a new payroll deduction account, for whatever reason, the employment represented by that account may not immediately be reflected in the information supplied to SEPH.

Les procédures de l'EERH pour la mise à jour de la liste d'établissements est un autre facteur qui peut affecter l'écart. Il se crée constamment de nouvelles entreprises mais, en raison du temps qu'il faut pour les inscrire sur le régistre des entreprises, une certaine fraction d'entreprises sont manquées par l'EERH. Pendant un mois normal, Revenu Canada-Impôt émet 15,000 nouveaux numéros de retenue sur la paye que l'on doit ajouter au registre des entreprises[4]. En 1985 et 1986, l'arriéré de dossiers était d'environ 100,000 par mois. (Toutefois, on a pu réduire cet arriéré et en avril 1987, il était de 75,000.) Comme ces employeurs ne sont pas interrogés, il est difficile de savoir combien d'employés ils ont. Les chiffres pourraient toutefois représenter une fraction importante de la différence entre le niveau de l'emploi de l'EPA et celui de l'EERH. La plupart de ces établissements sont nouveaux et petits. Cependant si une entreprise existante ajoute un nouveau compte de retenue sur la paye pour une raison quelconque, l'emploi représenté par ce compte risque de ne pas être pris immédiatement en considération dans les renseignements fournis lors de l'EERH.

In examining the incidence of new payroll deduction accounts, one finds a marked increase in the number of accounts in the summer months. The summer peak in the years 1980 to 1986 ranged from 27% to 41% above the monthly average for each year. If seasonal employers are the main cause of this increase, then given the time lag before they could be surveyed, their employment might never be picked up by SEPH. The LFS however would reflect any increase arising from seasonal operations because any affected individuals in the sample would be covered automatically.

En examinant les nouveaux comptes de retenue sur la paye, on remarque une forte augmentation pendant les mois d'été. Le point culminant enregistré en été au cours des années 1980-1986 dépassait de 27% à 41% la moyenne mensuelle observée pour l'année. Si la variation provient des employeurs saisonniers, l'EERH n'obtiendra peut-être jamais leurs renseignements, compte tenu du délai qui s'écoule avant qu'on ne puisse les interroger. Toutefois, l'EPA traduirait toutes les hausses découlant des activités saisonnières, car toutes les personnes visées seraient automatiquement comptées.

## DIFFERENCES IN REFERENCE PERIODS

The reference periods used by the two surveys are different. The LFS estimates are normally based on the week

## DIFFÉRENCES DUES AUX PÉRIODES DE RÉFÉRENCE

Les périodes de référence utilisées dans les deux enquêtes sont différentes. Les estimations de l'EPA sont normalement

which includes the fifteenth of the month. (For operational reasons, the reference weeks in November and December are usually one week earlier.) The SEPH reference period is nominally the last seven days of the month, but the questionnaire asks respondents to report for the last pay period in the month. The data are then converted to weekly equivalents. In months with uneven concentrations of temporary employees or during periods of rapid employment changes, estimates from the two surveys could show divergent movements. For example, if the school year ends after the LFS reference week in June, then students could be counted as employed in SEPH but not in the LFS.

basées sur la semaine qui comprend le 15e jour du mois. (Pour des raisons pratiques, la période de référence en novembre et décembre est généralement une semaine plus tôt.) La période de référence de l'EERH couvre en principe les sept derniers jours du mois, mais les questions mêmes sont posées en fonction de la dernière période de paye du mois. Les résultats sont ensuite convertis en données équivalentes hebdomadaires. Pour les mois où la répartition des employés temporaires est inégale, ou en périodes de changement rapide, les deux enquêtes pourraient alors indiquer des mouvements divergents. Par exemple, si l'année scolaire se termine après la semaine de référence de juin, les étudiants pourraient se classer parmi les personnes occupées de l'EERH mais non de l'EPA.

## OTHER FACTORS

The factors listed so far can explain some portion of the gap between household-based and establishment-based employment data. One can speculate as to other possible contributory factors.

One possible area is the "unrecorded economy". Estimates of the extent of employment in the unrecorded economy are inherently imprecise. The need for employers to deduct payrolls as a business expense undoubtedly limits its scope. Some research has concluded that this activity probably accounts for only a small portion of the Gross Domestic Product.[5]

Employment in the unrecorded economy would affect the gap between household and establishment employment data if the two surveys had different propensities to pick it up. Because no formal employer-employee relationship exists (i.e. no payroll deduction account), this employment would be missed by SEPH. Some portion however would likely be reported in the LFS.

## AUTRES FACTEURS

Les facteurs énumérés jusqu'à présent peuvent expliquer une partie de l'écart qui existe entre les données sur l'emploi recueillies auprès des ménages et des établissements. Quels autres facteurs peuvent contribuer à cet écart?

"L'économie non recensée" est un des facteurs possibles. Il va de soi que l'estimation du volume du travail au sein de l'économie non recensée est imprécise. Toutefois, l'envergure de ce genre d'activité se trouve certainement limitée du fait que les employeurs doivent compter les salaires versés à titre de dépenses de l'entreprise. Il ressort de certaines études que cette activité représente probablement un faible pourcentage du produit intérieur brut[5].

Si la propension des deux enquêtes à identifier cette activité différait, l'écart serait modifié en conséquence. Puisqu'aucune relation formelle d'employeur-employé n'existe (c.-à.-d. il n'y a pas de compte de retenues sur la paye), ce travail serait manqué par l'EERH, mais une partie serait peut-être déclarée dans l'EPA.

Another factor affecting the LFS/SEPH gap may be the completeness of response to the two surveys. Persons with legal problems may not respond to the LFS. Counter-balancing this, some larger employers may inadvertently omit some segments of their organization from the report. This omission can result from a lack of a mutual understanding between the respondent and Statistics Canada on the segments being reported (for example, some firms may have "confidential" payrolls for executives). Although both surveys devote considerable effort to avoiding these problems, the degree to which they actually exist and affect the employment level gap is unknown and is virtually impossible to determine.

Autre facteur qui influe sur l'écart entre l'EERH et l'EPA, c'est l'intégralité des données recueillies au cours des deux enquêtes. Il se peut que les personnes qui ont des problèmes vis-à-vis de la loi ne soient pas déclarés lors de l'EPA. En contrepartie, certains employeurs importants pourraient omettre par inadvertance certains groupes d'employés dans leur déclaration. Cela peut arriver s'il y a eu un malentendu entre le répondant et Statistique Canada quant aux données à déclarer; par exemple, certaines entreprises peuvent tenir des listes de paye "confidentielles" pour les cadres supérieurs. Certes, dans les deux enquêtes, on déploie un effort considérable pour éviter les problèmes de ce genre, mais on ne sait pas dans quelle mesure ils existent et peuvent influer sur l'écart entre les deux niveaux de l'emploi.

## SMALL AREA ESTIMATES AND THE GAP

More and more, users want employment data below the provincial level: for example, estimates for cities, electoral districts, or economic regions. At this level of detail, discrepancies between SEPH and LFS data can be substantially greater than for larger areas.

In any sample survey, the reliability of the data generated depends in part on the number of observations. Since both the LFS and SEPH use samples, their data suffer from increasing sampling error with increasing disaggregation. Both samples are designed to yield reliable estimates at the provincial level. Although estimates can be produced for subprovincial regions, these figures are subject to much greater variability because of the small samples upon which they are based.

## DONNÉES SUR LES PETITES RÉGIONS ET L'ÉCART

De plus en plus, les utilisateurs cherchent à obtenir des données infraprovinciales sur l'emploi, par exemple pour les villes, les circonscriptions électorales ou les régions économiques. À ce niveau, les différences entre les données de l'EERH et celles de l'EPA risquent de devenir beaucoup plus importantes que pour les grandes régions.

Dans toute enquête-échantillon, la fiabilité des données dépend du nombre d'observations. Comme on se sert d'échantillons pour l'EPA et pour l'EERH, les données obtenues sont de plus en plus entachées d'erreurs d'échantillonnage au fur et à mesure que le niveau est détaillé. Les deux échantillons visent à fournir des estimations fiables au niveau provincial. Même si des estimations peuvent être produites pour des régions infraprovinciales, leur variabilité est élevée en raison des petits échantillons sur lesquels elles sont basées.

## SUMMARY OF LFS/SEPH DIFFERENCES

The LFS and SEPH provide two perspectives on the labour market - the household and the establishment. Despite the difference between their estimates of employment, over the longer run these surveys show similar trends. While the gap between the two series cannot be completely eliminated, its components can be estimated with varying degrees of accuracy. The table on the following page summarizes the various adjustments.

Statistics Canada has introduced improvements to the SEPH sampling frame and is currently undertaking a major revision of the coverage and maintenance procedures for its establishment lists. This includes a substantial increase in the profiling of businesses, to determine the industry or industries that a firm is in and to set up the appropriate establishments for statistical reporting. This should improve the timeliness of updates to the SEPH frame and gradually raise the SEPH employment estimates.

The choice of the appropriate employment estimates for a specific application depends upon which aspects of the labour market are most relevant. The LFS provides timely, overall estimates of labour market conditions, nationally and provincially. Its prime focus is demographic, but it does provide reasonable indications of change within broad industry and occupation groups. SEPH provides much more accurate estimates of employment changes by detailed industry categories in addition to data on average weekly earnings.

## RÉSUMÉ DES DIFFÉRENCES ENTRE L'EPA ET L'EERH

L'EPA et l'EERH fournissent deux perspectives du marché du travail - l'une, des ménages et l'autre des entreprises. Malgré les divergences entre leurs estimations de l'emploi, ces enquêtes affichent des tendances similaires à long terme. Alors que l'écart entre les deux séries ne peut être éliminé complètement, ses composantes peuvent être estimées à divers niveaux de précision. Le tableau suivante résume les divers ajustements.

Statistique Canada a mis en oeuvre des améliorations à la base de sondage de l'EERH et prépare présentement une révision majeure de la couverture et des procédures de maintien pour sa liste d'établissements. Ceci comprend une augmentation considérable des efforts pour classer les entreprises dans les bonnes branches d'activité et pour identifier les établissements appropriés aux fins de déclarations statistiques. On pourra alors accélérer les mises à jour de la base de l'EERH et graduellement augmenter les estimations de l'emploi de l'EERH.

Le choix d'estimations de l'emploi dépend des aspects du marché du travail visés dans une étude particulière. L'EPA fournit des estimations globales à jour des conditions du marché du travail, à l'échelle nationale et provinciale. Elle traite surtout de l'aspect démographique, mais elle fournit des indications justes de variations à l'intérieur des grands groupes d'activité économique et de profession. L'EERH fournit des estimations des variations de l'emploi beaucoup plus précises, selon des catégories détaillées de branches d'activité, en plus des données sur la rémunération hebdomadaire moyenne.

## FOOTNOTES

**1.** Prior to the introduction of SEPH in 1983, establishment-based data were provided by a combination of several surveys.

**2.** The new LFS questionnaire identified significantly more part-time employment, especially among women and young persons.

**3.** Take-all units: (a) have 200 or more employees; (b) have more than one reporting unit, (c) are units of government departments or crown corporations; (d) are elementary or secondary schools; or (e) meet other pre-specified conditions.

**4.** New accounts are required to be opened whenever a new employer-employee relationship is established for the remittance of taxes, UI, and CPP/QPP contributions. Each month RCT forwards a copy of the deduction account number file to the Central Services Function Division of Statistics Canada. New accounts are identified and assigned a special SIC code pending the receipt of further information from the firm. After the final SIC code is assigned and if the new records are in-scope (i.e. they have employees and their SIC codes are covered by SEPH), they become eligible for inclusion in the survey. Even under ideal conditions this process could take several months.

**5.** Berger, Seymour, "The Unrecorded Economy: Concepts, Approach and Preliminary Estimates for Canada, 1981", in the **Canadian Statistical Review,** (Statistics Canada Cat. 11-003E), April 1986.

## NOTES

**1.** Avant la mise en oeuvre de l'EERH en 1983, les données étaient recueillies au moyen de plusieurs enquêtes auprès des établissements.

**2.** Suite à l'introduction du nouveau questionnaire de l'EPA, on a observé une augmentation significative de l'emploi à temps partiel, surtout chez les femmes et les jeunes.

**3.** Les unités de l'échantillon à tirage complet sont: a) celles qui comptent 200 employés ou plus; b) celles qui comptent plus d'une unité déclarante; c) les services des ministères ou des sociétés d'État; d) les écoles primaires ou secondaires; et e) celles qui répondent à d'autres conditions préétablies.

**4.** L'ouverture de nouveaux comptes est nécessaire lorsqu'une nouvelle relation employeur-employé est établie pour la remise d'impôt, d'AC, et de contributions au RPC/RRQ. Chaque mois, RCI fournit une copie du dossier des numéros de compte de déductions à la division de la base centrale de Statistique Canada. Les nouveaux comptes sont identifiés et un code spécial de la CTI leur sont attribués jusqu'à ce que l'entreprise fournisse de plus amples informations. Après que le code de la CTI ait été alloué, et si les nouveaux dossiers font partie du champs d'observation (c.-à-d. ils ont des employés et la branche d'activité n'est pas exclue de l'EERH), ils deviennent éligibles pour l'enquête. Même dans les meilleures conditions, cette procédure peut prendre plusieurs mois.

**5.** Berger, Seymour, "L'économie non recensée: concepts, méthodes et estimations préliminaires pour le Canada, 1981", dans la **Revue statistique du Canada,** (no. 11-003F au catalogue de Statistique Canada), avril 1986.

## CONCEPTS AND METHODS

### Objectives

The Survey of Employment, Payrolls and Hours is designed to measure, on a monthly basis, the levels and month-to-month trends of employment, paid hours and earnings. These measures are compiled at detailed industrial and geographic levels.

All industries are covered by the survey with the exception of agriculture, fishing and trapping, private household services, religious organizations, and military services.

### Source of Data

The statistics contained in this report are based on information obtained through a mail survey of firms, institutions and organizations of all sizes.

The **firm** is defined as any business entity whether incorporated or not; it comprises sole proprietorships, partnerships, corporations and other forms of organization such as co-operatives. Most firms consist of only one "establishment" (see definition under Industrial Classification) but, in some cases, the firm is made up of a number of establishments which may or may not be engaged in the same kind of economic activity.

The universe for the survey is derived from a central file of employers maintained by the Business Register and Profiling Division of Statistics Canada.

### Industrial Classification

All **firms** are assigned to an industry on the basis of their principal activity. In instances where the firm is engaged in only one kind of industrial activity, the industrial classification is straightforward. Classification problems arise when a firm is active in more than one kind of classifiable industrial activity. This usually occurs when a firm operates more than one establishment. The **establishment** (typically a factory, mine, store or a similar unit) is defined, for statistical purposes, as the smallest separate operating entity capable of reporting all elements of basic industrial data which permit the calculation of "census value added" or "gross mark up" or "gross profit" as well as data on employment and payrolls.

For purposes of detailed geographical statistics, the establishment is often sub-divided into **reporting units** which, although not capable of reporting all basic industrial statistics, can report employment, payrolls and hours data for particular locations.

The industrial classification of the statistics contained in this report is based on the 1970 version of the Standard Industrial Classification. A description of the various industries and groups of industries is contained

## CONCEPTS ET MÉTHODES

### Objectifs

L'enquête sur l'emploi, la rémunération et les heures de travail a pour objet de mesurer mensuellement les niveaux et les tendances de l'emploi, des heures rémunérées et des gains. Ces mesures sont rassemblées à des niveaux détaillés selon l'activité économique et le lieu géographique.

L'enquête vise tous les secteurs de l'activité économique sauf l'agriculture, la pêche et le piégeage, le service domestique des ménages, les organismes religieux et les services de la défense.

### Source des données

Les statistiques présentées dans ce bulletin se fondent sur des renseignements recueillis au moyen d'une enquête postale menée auprès des entreprises et autres organismes ou établissements de toutes tailles.

Le terme **entreprise** désigne toute entité commerciale ou industrielle constituée ou non en corporation; il peut s'agir d'une entreprise à propriétaire unique, d'une société en nom collectif, d'une corporation ou d'une autre forme quelconque d'organisation, telle une coopérative. La plupart des entreprises ne comptent qu'un seul "établissement" (voir la définition sous la rubrique "Classement par activité économique") mais, dans certains cas, l'entreprise peut regrouper plusieurs établissements qui exercent ou non le même genre d'activité.

L'univers de l'enquête est établi à l'aide d'un registre central des employeurs tenu par la Division des profils et du registre des entreprises de Statistique Canada.

### Classement par activité économique

Toutes les **entreprises** appartiennent à une branche d'activité économique déterminée en fonction de leur activité principale. Si l'entreprise n'exerce qu'un seul genre d'activité économique, le classement est simple. Les problèmes surgissent lorsqu'elle en exerce plus d'un, par exemple lorsqu'elle possède plus d'un **établissement.** À des fins statistiques, on définit l'établissement (en général une usine, une mine, un magasin ou une unité semblable) comme la plus petite unité constituant un ensemble fonctionnel distinct capable de déclarer, à l'égard de l'activité économique, tous les éléments statistiques de base qui permettent de calculer la "valeur ajoutée" ou la "majoration brute" ou le "bénéfice brut", ainsi que des données sur l'emploi et la rémunération.

Pour obtenir des statistiques géographiques détaillées, souvent on subdivise l'établissement en **unités déclarantes** qui, bien qu'elles ne puissent fournir toutes les statistiques de base, sont en mesure de déclarer des données sur l'emploi, la rémunération et les heures de travail relativement à certains endroits.

Le classement des statistiques que nous présentons dans ce volume s'inspire de la Classification des activités économiques, de 1970. Vous trouverez une description de ces diverses activités et de leurs groupements dans le bulletin de la Classification

in the "Standard Industrial Classification Manual", Catalogue No. 12-501. The "S.I.C. Code" columns on the tables correspond to the codes of this manual. These tables also contain the following groupings which are not part of the "Standard Industrial Classification Manual":

a) Industrial aggregate (031-951) represents the sum of all the industries included in the survey (see Objectives).

b) Goods-producing industries (031-421) comprise forestry, mining, manufacturing and construction.

c) Service-producing industries (501 to 951) consist of transportation, communication and other utilities, trade, finance, insurance and real estate, services (except for religious organizations and private households), and public administration (with the exception of military personnel, and other government services).

d) Durable goods manufacturing (durable) includes wood industries (251-259), furniture and fixture industries (261-268), primary metal industries (291-298), metal fabricating industries except machinery and transportation equipment (301-309), machinery industries except electrical machinery (311-318), transportation equipment industries (321-329), electrical products industries (331-339), and non-metallic mineral products industries (351-359).

e) Non-durable goods manufacturing (non-dur) is the sum of food and beverage industries (101-109), tobacco products industries (151-153), rubber and plastic products industries (162-165), leather industries (172-179), textile industries (181-189), knitting mills (231-239), clothing industries (243-249), paper and allied industries (271-274), printing, publishing and allied industries (286-289), petroleum and coal products industries (365-369), chemical and chemical products industries (372-379), and miscellaneous manufacturing industries (391-399).

f) Building construction (404, 421) comprises building construction (404) and special-trade contractors (421).

g) Industrial and Heavy (Engineering) construction (406, 409) includes highway, bridge and street construction (406) and other construction (409).

h) Education services (809T) consist of kindergartens and nursery schools (801), elementary and secondary schools (802), schools of arts and performing arts (803), vocational centers, trade schools and business colleges (804), post-secondary non-university educational institutions (805), universities and colleges (806), and education and related services (809).

i) Public administration (909-951) contains only the establishments engaged in activities that are gov-

des activités économiques, n$^{o}$ 12-501 au catalogue. Les codes C.A.É. qui apparaissent dans les colonnes de certains tableaux de notre publication correspondent au codes de ce bulletin. Les tableaux en question renferment aussi les groupes suivants, qui ne figurent pas dans la Classification des activités économiques:

a) Ensemble des activités économiques (031-951) — Il s'agit de la somme des diverses activités économiques visées par l'enquête (voir objectifs).

b) Branche productrice de biens (031-421) — Ce groupe englobe les forêts, les mines, les manufactures et la construction.

c) Branche des services (501-951) — Englobe les transports, les communications et autres services publics, le commerce, les finances, assurances et affaires immobilières, les services (sauf les organismes religieux et les ménages privés), et l'administration publique (à l'exception du personnel militaire et des autres services gouvernementaux).

d) Fabrication des biens durables (durables) — Englobe les industries du bois (251-259), l'industrie du meuble et des accessoires d'ameublement (261-268), l'industrie de première transformation des métaux (291-298), l'industrie des produits métalliques (sauf les machines et le matériel de transport) (301-309), la fabrication des machines (sauf le matériel électrique) (311-318), l'industrie du matériel de transport (321-329), l'industrie des appareils et du matériel électriques (331-339) et l'industrie des produits minéraux non métalliques (351-359).

e) Fabrication des biens non durables (non dur.) — Englobe l'industrie des aliments et boissons (101-109), l'industrie du tabac (151-153), l'industrie du caoutchouc et des produits en matière plastique (162-165), l'industrie du cuir (172-179), l'industrie textile (181-189), la bonneterie (231-239), l'industrie de l'habillement (243-249), l'industrie du papier et des produits connexes (271-274), l'imprimerie, l'édition et industries connexes (286-289), l'industrie du pétrole, du charbon et de leurs dérivés (360-369), l'industrie chimique et des produits connexes (372-379), et les industries manufacturières diverses (391-399).

f) Bâtiment (404, 421) — Englobe la construction de bâtiments (404) et l'activité des entrepreneurs spécialisés (421).

g) Construction industrielle et lourde (travaux de génie) (406, 409) — Englobe la construction de routes, ponts et rues (406) et autres constructions (409).

h) Enseignement et services connexes (809T) — Englobe les jardins d'enfants et écoles maternelles (801), les écoles primaires et secondaires (802), les écoles de beaux-arts (803), les centres de formation professionnelle, écoles de métiers et collèges commerciaux (804), les établissements d'enseignement postsecondaire non universitaire (805), les universités et collèges (806), et l'enseignement et services connexes (809).

i) Administration publique (909-951) — Comprend les établissements dont les activités ont un caractère essentiellement

ernmental in character and those serving as internal service agencies of the public service. Government owned establishments primarily engaged in activities assigned to other industries are classified in those industries along with similar establishments owned by non-government bodies. Therefore, data included in this industry division do not represent the actual number of persons employed by government at any level.

## Geographic Classification

Reporting units are assigned to a province, a census division, an economic region (for the province of Quebec and Ontario) and, where applicable, to a metropolitan or urban area. The survey selected metropolitan and urban areas as delineated for the 1981 Census of Population; these areas usually consist of the urban centre as well as the surrounding territory and had a population of 25,000 inhabitants or more. The reporting units not located in a tabulated urban area or not allocated to a compiled census division are included in the provincial and national totals.

A description of the various geographical areas is contained in the "Standard Geographical Classification Manual, 1981", Catalogue No. 12-567.

## Definitions

1. **Reference Period**

Conceptually, the data in this report refer to the last seven days in the specified month. In practice, few firms keep payroll records covering precisely this period. Therefore, firms are asked to report for their last pay period or pay periods in each month. When the reported pay period is longer than one week, the data are reduced to a week using the number of days the firm usually operates during a week divided by the number of working days covered by the reported pay period.

If, owing to **strikes,** unpaid holidays or other similar unpaid circumstances, the data reported are not representative of the last seven days of the month, adjustments are made to reflect the economic situation of the reference period (i.e. when a strike effects the last seven days of the survey month, the derived data will reflect the strike situation).

2. **Employee**

All persons drawing pay for services rendered or for paid absences and for whom the employer is required to complete a Revenue Canada T-4 Supplementary Form constitute employees.

gouvernemental, et les organismes auxiliaires assurant les services internes de l'État. Les établissements publics dont l'activité dominante relève d'autres activités économiques sont classés sous les mêmes rubriques que les établissements privés semblables. Ainsi, les données publiées pour cette division économique ne représentent pas le nombre réel de personnes employées par les différents pouvoirs publics.

## Classement géographique

On attribue les unités déclarantes à une province, à une division de recensement, à une région économique (pour les provinces suivantes: Québec et Ontario) et, s'il y a lieu, à une région métropolitaine ou urbaine. Les régions métropolitaines et urbaines choisies pour l'enquête sont celles du recensement de la population de 1981; ces régions, qui se composent habituellement d'un centre urbain et du territoire environnant, comptaient lors du dernier recensement 25,000 habitants ou plus. Les unités déclarantes situées en dehors de toute région urbaine indiquée dans les tableaux, ou non attribuées à une division de recensement prise en compte, font partie des totaux provinciaux et nationaux.

La description des diverses régions géographiques se trouve dans la "Classification géographique type, 1981", numéro 12-567 au catalogue.

## Définitions

1. **Période de référence**

En théorie, les données sur l'emploi se rapportent aux sept derniers jours du mois de référence. Dans la pratique, peu d'entreprises tiennent des registres de paye pour cette période précise; on demande donc aux répondants de faire porter leur déclaration sur la(les) dernière(s) période(s) de paye de chaque mois. Lorsque la période de paye sur laquelle porte la déclaration dépasse une semaine, on rajuste les données en divisant le nombre de jours d'activité hebdomadaire de l'entreprise par le nombre de jours ouvrables compris dans la période de paye sur laquelle porte la déclaration.

Si, en raison d'une **grève,** d'un congé non payé ou d'autres circonstances semblables, les données déclarées ne sont pas représentatives des sept derniers jours du mois, on procède aux rajustements qui s'imposent afin de traduire la situation qui régnait pendant la période de référence (cela signifie que lorsqu'une grève touche les sept derniers jours du mois d'enquête, les données qui en découlent reflètent l'état de grève).

2. **Salarié**

Toute personne rétribuée pour ses services ou ses absences et pour laquelle l'employeur doit remplir une déclaration T-4 Supplémentaire de Revenu Canada, est un salarié.

The employee concept comprises full-time employees, part-time employees (those who regularly work fewer hours than the standard work week of the establishment) and casual or temporary employees (those who are hired for discontinuous periods or on an irregular basis). It also comprises working owners, directors, partners and other officers of incorporated businesses.

The employee concept excludes owners or partners of unincorporated businesses and professional practices, the self-employed, unpaid family workers, persons doing non-remunerative work, pensioners, home workers, members of elected or appointed bodies, persons working outside Canada, military personnel and persons providing services to an establishment on a contract basis. It also excludes persons who did not receive any pay from the employer for the entire survey reference period (e.g. persons on strike, persons on unpaid holidays, persons receiving remuneration from an insurance, Workmen's Compensation or other related fund, etc.); however, employees paid from the employer for a part of the reference period and unemployed or on strike for the rest are counted as employed.

The employees are classified into the following categories:

a) **Employees paid by the hour**
Any employee whose basic wage is expressed as an hourly rate.

b) **Salaried Employees**
Any employee whose basic remuneration is a fixed amount for a period of at least one week.

c) **Other Employees**
Those employees whose basic remuneration is in the form of commissions, piece rates, mileage allowances, etc.

d) **Non-teaching Staff**
All employees other than teachers and academic staff, i.e. president, vice-president, librarian, registrar, bursar, accountant, guidance counsellor, laboratory technician, personnel officer, and other services (e.g. janitor, caretaker, bus driver, etc.)

e) **Teaching Staff**
Those classified as teachers, instructors or academics in the payroll records (e.g. principal, professor, dean, head of department, master, teacher, etc.) whether they teach during the day or evening. Supply or substitute teachers are excluded.

f) **Supply or Substitute Teachers**
Teachers who are called in to teach whenever their services are needed either to augment

Le terme "salariés" désigne les salariés à temps plein, les salariés à temps partiel (ceux qui travaillent régulièrement un nombre d'heures inférieur à la semaine normale de travail de l'entreprise) et les salariés occasionnels ou temporaires (ceux qui sont embauchés de façon irrégulière ou temporaire). Il désigne aussi les propriétaires, les administrateurs, les associés et les autres dirigeants actifs des entreprises constituées en corporation.

Le concept de salarié exclut les propriétaires et les associés des entreprises non constituées en corporation et ceux des bureaux voués à l'exercice d'une profession libérale, les travailleurs autonomes, les travailleurs familiaux non rémunérés, les bénévoles, les retraités, les travailleurs à domicile, les membres des corps élus ou nommés, les personnes travaillant à l'extérieur du Canada, le personnel militaire et les personnes fournissant des services à un établissement sur une base forfaitaire. Sont également exclus les travailleurs n'ayant pas reçu de paye de leur employeur pendant la période de référence de l'enquête (i.e. les personnes en grève, en congé non payé, celles recevant une rémunération aux termes d'un régime d'assurance, d'une caisse d'indemnisation des accidents au travail ou d'une caisse analogue, etc.); cependant, les travailleurs rémunérés par leur employeur pour une partie de la période de référence, mais en chômage ou en grève pendant l'autre partie, sont quand même considérés comme salariés.

Les salariés sont classés dans les catégories suivantes:

a) **Salariés rémunérés à l'heure**
Tout salarié dont la rémunération de base est calculée selon un taux horaire.

b) **Employés**
Tout salarié dont la rémunération de base constitue une somme fixe versée pour une période d'au moins une semaine.

c) **Autres salariés**
Tout salarié dont la rémunération de base se présente sous forme de commissions, de salaire à la pièce, d'indemnités de trajet, etc.

d) **Personnel non enseignant**
Tous les salariés autres que le personnel enseignant, c'est-à-dire le président, le vice-président, le bibliothécaire, le secrétaire général, l'économe, le comptable, les orienteurs, les techniciens de laboratoire, les agents du personnel, le concierge, les chauffeurs d'autobus, etc.

e) **Personnel enseignant**
Tout travailleur classé comme enseignant ou chargé de cours dans les dossiers du service de la paye (directeur, professeurs, doyens, chefs de département, maîtres, enseignants, etc.), qu'il enseigne le jour ou le soir. Les suppléants ou remplaçants sont exclus.

f) **Suppléants ou remplaçants**
Enseignants appelés à se présenter au travail lorsqu'on a besoin de leurs services soit pour accroître le

the existing staff or as a short-term replacement for a full-time or part-time teacher.

3. **Earnings**

Earnings represent gross pay before deductions for taxes, unemployment insurance contributions, etc.

The payroll concept does not include supplementary labour costs such as employer's contributions to unemployment insurance, medical plans, Workmen's Compensation and other welfare plans, nor does it include the cost of equipment, the value of room and board, compensation in kind, travelling expenses, retirement gratuities, bonuses paid at irregular and infrequent intervals or director's fees.

a) **Gross Pay**
Gross pay includes salaries, straight-time wages, piece-work and regular commission earnings, regular paid incentive, cost of living and other bonuses, overtime earnings **and** payments to persons absent with pay in the survey reference week.

b) **Overtime Pay**
All pay received for the number of hours worked in excess of the standard workday or workweek.

4. **Hours**

a) **Total hours paid**
All hours worked, including overtime hours, **plus** hours of paid absence (e.g. holidays, vacation, sick leave, jury duty, etc.)

b) **Overtime Hours**
The total hours for which overtime was paid. These represent the hours worked.

5. **Paid Absence**

Paid absence comprises paid holidays, vacation, sick leave including industrial injury and personal leave such as bereavement leave, jury duty, etc.

6. **Standard Workweek**

The hours in the standard workweek constitute the average number of hours of work normally scheduled in a workweek.

personnel existant, soit pour remplacer pendant une courte période un enseignant à temps plein ou à temps partiel.

3. **Gains**

Les gains représentent la rémunération brute avant toutes déductions d'impôt, de cotisations d'assurance-chômage, etc.

Le concept de rémunération ne comprend pas les frais supplémentaires de main-d'oeuvre tels que les contributions de l'employeur à la caisse d'assurance-chômage, aux régimes d'assurance-maladie, à la caisse d'indemnisation des accidents du travail et à d'autres régimes de prévoyance; il ne comprend pas non plus le coût du matériel, la valeur du couvert et du gîte, les paiements en nature, les frais de déplacement, les indemnités de retraite, les gratifications versées à intervalles irréguliers et peu fréquents, ni les jetons de présence des administrateurs.

a) **Rémunération brute**
Comprend les salaires, les traitements à taux ordinaires, la rémunération du travail à la pièce et les commissions régulières, ainsi que les primes, indemnités de vie chère et autres gratifications versées régulièrement, les payes de surtemps **et** la rémunération des absences payées dans la semaine de référence de l'enquête.

b) **Rémunération du temps supplémentaire**
Ensemble de la rémunération versée pour le nombre d'heures de travail effectuées en sus de la journée ou de la semaine normale de travail.

4. **Heures**

a) **Nombre total d'heures payées**
Ensemble des heures travaillées, y compris les heures supplémentaires, **plus** les heures de congé (par ex., les jours fériés, les vacances, les congés de maladie, les congés pour service judiciaire, etc.)

b) **Heures supplémentaires**
Total des heures payées à un taux majoré; il s'agit d'heures réellement travaillées.

5. **Absence payée**

Les absences payées comprennent toutes les heures rémunérées dans le cas des jours fériés payés, des vacances, des congés de maladie, ainsi que des congés d'accident du travail et des congés pour motifs personnels tels que les congés de deuil et les congés pour service judiciaire.

6. **Semaine normale de travail**

Les heures d'une semaine normale de travail reflètent la moyenne des heures de travail normalement fixées pour une semaine.

### 7. Take-all and Take-some Units

Take-all units are reporting units of firms or organizations which are included in the survey sample with certainty every month. These include:

a) All firms or organizations with 200 or more employees;

b) All firms with more than one reporting unit;

c) Firms which report their survey data on computer listings rather than on the standard questionnaire;

d) Units of government departments and crown corporations;

e) Units belonging to elementary and secondary schools;

f) Certain other pre-specified units or firms.

Take-some units are all the other firms in the universe which have a known probability of selection.

### 7. Unités à tirage complet et à tirage partiel

Les unités à tirage complet sont les unités déclarantes d'entreprises ou d'organisations incluses en permanence dans l'échantillon de l'enquête. Elles comprennent:

a) toutes les entreprises de 200 salariés ou plus;

b) toutes les entreprises ayant plus d'une unité déclarante;

c) les entreprises qui déclarent leurs données au moyen d'un imprimé d'ordinateur plutôt qu'à l'aide du questionnaire;

d) unités des services gouvernementaux et des sociétés de la couronne;

e) unités propres aux écoles primaires et secondaires;

f) d'autres unités ou entreprises préalablement choisies.

Les unités à tirage partiel sont toutes les autres entreprises qui ont une probabilité connue d'être choisies dans l'échantillon de l'enquête.

## Methodology

The statistics contained in this publication are based on information obtained through a sample survey of reporting units. The data is collected by means of questionnaires mailed monthly to a sample of about 70,000 reporting units selected out of a universe of about 700,000. The sample covers all industries in scope for the survey, all provinces and territories and all sizes of units. Both the universe and the sample are updated monthly for births and deaths.

### Stratification

For the determination of the survey sample size and for the purpose of the sample selection, the universe of reporting units is stratified by 12 provinces and territories, 16 industry groups and 4 size groups. (An industry group is slightly more detailed than the 1-digit industry code). The size of a unit is defined to be the total number of paid employees in that unit. The four size groups are 0 to 19, 20 to 49, 50 to 199 and 200 or more employees.

The universe of reporting units is further stratified into **take-all** and **take-some** categories as defined earlier under Definitions.

## Méthodologie

Les statistiques présentées dans cette publication se fondent sur les résultats d'une enquête effectuée par sondage auprès d'unités déclarantes. Les données sont recueillies au moyen d'un questionnaire posté tous les mois à un échantillon de quelque 70,000 unités déclarantes provenant d'un univers d'environ 700,000 unités. L'échantillon couvre toutes les activités économiques que vise l'enquête, ainsi que les toutes les provinces et les territoires et toutes les tailles d'unité. Chaque mois, nous mettons à jour l'univers ainsi que l'échantillon, en tenant compte des créations et des disparitions d'unités ou d'entreprises.

### Stratification

Pour déterminer la taille et la composition de l'échantillon, nous répartissons l'univers des unités déclarantes en 12 provinces et territoires, 16 groupes industriels (activités économiques) et quatre groupes de taille. (Un groupe industriel est légèrement plus détaillé qu'une industrie dont le code n'a qu'un chiffre). La taille d'une unité se définit comme étant le nombre total de salariés rémunérés que compte cette unité. Les quatre groupes de taille sont 0 à 19, 20 à 49, 50 à 199 et 200 salariés et plus.

En outre, l'univers des unités déclarantes est stratifié en deux catégories: les unités à **tirage complet** et les unités à **tirage partiel**, au sens que nous avons précisé dans la section "Définitions".

**Sample allocation and selection**

The size of the take-some sample for the survey has been determined so as to provide estimates of total number of paid employees at the industry group and province level with a prespecified reliability. The determination has been done under the requirement that the sample at the industry group and province level is allocated to each size group in proportion to the total estimated take-some employment in that size group. If the sampling fraction resulting from this allocation is less than .01, then a minimum sampling fraction of .01 is adopted in order to avoid unusually large weights. The allocation makes the probability of inclusion of a unit in the sample in a size stratum approximately proportional to the average number of employees per unit in that size stratum. The sample design, therefore, provides for a small sample of small reporting units if the concentration of employment is mainly in the large reporting units. On the other hand, if the proportion of total employment from small reporting units is substantial, then the sample will include a large number of small reporting units.

The number of reporting units to be selected at the industry group, province and size levels is again allocated to each three-digit industry within that industry group, province and size in proportion to the total number of reporting units in that three-digit industry. In other words, the sampling fraction used at the three-digit industry level is the same as the one determined at the industry group, province and size. However, it should be noted that a minimum sample of three units is selected whenever the use of the sampling fraction results in less than 3 units. If the universe itself is less than three units, then all the units are taken into the sample. Note that beginning with the January 1986 reference month, the sampling fractions for size group three (50 to 199 employees) in all manufacturing industries were changed to one.

A systematic sample of the predetermined number of units is drawn from the take-some universe in every three-digit industry, province and size group. The total sample is the sum of the number of take-all and selected take-some units.

**Sample rotation**

The design provides for rotation of the take-some sample within a three-digit industry, province and size group. Each month, approximately one-twelfth of the take-some sample is replaced. This means that units generally remain in the sample for 12 months before rotating out. The units are not eligible for reselection for at least 12 months after they rotate out.

In some small three-digit industry, province and size group cells it may not be possible to rotate out units each month. Consequently, in some small cells, units may have to stay longer than 12 months. Note that beginning with the reference month of January 1986, there is no rotation of units with 50 to 199 employees in the manufacturing industries.

**Répartition et choix de l'échantillon**

La taille de la portion à tirage partiel de l'échantillon a été déterminée de façon à fournir, avec une fiabilité prédéterminée, des estimations du nombre total de salariés rémunérés, au niveau du groupe industriel et de la province. Ce calcul tient compte du fait que l'échantillon, au niveau du groupe industriel et de la province, doit être réparti dans chaque groupe de taille proportionellement à l'estimation de l'emploi total au sein de la portion à tirage partiel de chacun des groupes de taille. Si la fraction d'échantillon résultant de cette répartition est inférieure à 0.01, on la remplace alors par la fraction minimale 0.01 afin d'éviter toute pondération excessive. La répartition est telle que la probabilité qu'une unité entre dans une strate particulière de l'échantillon est à peu près proportionnelle au nombre moyen de salariés par unité comprise dans cette strate. Le plan d'échantillonnage prévoit donc un petit échantillon de petites unités déclarantes lorsque l'emploi se concentre principalement dans les grandes unités déclarantes. Par contre, si l'emploi total provenant des petites unités déclarantes est élevé, alors l'échantillon contiendra un grand nombre de petites unités déclarantes.

Le nombre d'unités qu'il faut choisir au niveau du groupe industriel, de la province et de la taille est, en outre, réparti entre chacune des industries ayant un code à trois chiffres, lesquelles font partie du groupe industriel, de la province et de la taille considérés; cette répartition se fait proportionnellement au nombre total d'unités déclarantes comprises dans l'industrie dont le code comporte trois chiffres. En d'autres termes, la fraction d'échantillon utilisée au niveau industriel à trois chiffres est la même que celle déterminée pour le groupe industriel, la province et la taille. Il faut cependant noter que l'échantillon minimal est de trois unités, peu importe le résultat obtenu en utilisant la fraction d'échantillon. S'il y a moins de trois unités dans l'univers, toutes les unités disponibles sont incluses dans l'échantillon. Notons qu'à partir du mois de référence de janvier 1986, la fraction d'échantillon associée aux unités du groupe de la taille trois (de 50 à 199 salariés) des industries manufacturières est un.

Au sein de la portion à tirage partiel, on choisit un échantillon systématique d'un nombre prédéterminé d'unités dans chaque industrie ayant un code à trois chiffres, et ce dans chaque province et chaque groupe de taille. L'échantillon total résulte de la somme du nombre d'unités à tirage complet et du nombre d'unités à tirage partiel sélectionnées.

**Rotation de l'échantillon**

Pour chaque industrie (code à trois chiffres), province et groupe de taille, le plan prévoit une rotation de la portion à tirage partiel de l'échantillon. Chaque mois, le douzième environ de la portion à tirage partiel de l'échantillon est remplacé. Cela signifie qu'en général les unités demeurent 12 mois dans l'échantillon avant d'en sortir par voie de rotation. Les unités ne peuvent pas être choisies de nouveau avant au moins 12 mois suivant leur mois de sortie.

Dans le cas de certaines petites cellules (une cellule regroupe les unités de même industrie au niveau du code à trois chiffres, même province et même groupe de taille), il est parfois impossible d'assurer la rotation des unités chaque mois. Ainsi, il peut arriver que des unités demeurent plus de douze mois dans certaines petites cellules. Notez qu'à partir du mois de référence de janvier 1986, dans les industries manufacturières il n'y a aucune rotation des unités ayant de 50 à 199 salariés.

**Data edit and correction**

All the questionnaires are initially screened for completeness by the interviewers of the Statistics Canada regional offices. Thereafter, extensive computer edit procedures for accuracy and consistency are performed at the Ottawa head office. As a result of any of the above-mentioned editing techniques, the respondent may be contacted to confirm or explain the data.

The edit procedures include the comparison of the values of key characteristics (e.g. number of employees, hours worked, salary per employee, etc.) reported for consecutive months by the same unit in order to detect large changes or errors in reporting. Whenever there is a large change or the data appears inconsistent, the record is signaled by the computer edit for review and is subject to correction or acceptance as appropriate.

**Follow-up**

Reporting units which are non-respondents to the initial mailing are followed up by telephone by the staff of the regional offices of Statistics Canada. Priority for this follow-up is given to (i) units which are in the sample for the first time and which have not responded, (ii) units which have not responded for two consecutive months, (iii) large nonrespondent units. Follow-up also takes into account response rates and employment in the various industry groups in determining priority.

If units continue to be non-respondents even after follow-up, then data will be imputed for these units. All the records with imputed values are subject to the edits mentioned above.

**Imputation**

Imputation for nonrespondent units which have been in the survey for more than one month is based on the ratio of the monthly changes. The ratio of the monthly change for each characteristic is calculated from units that responded both in the current and the previous month and is applied to the previous month's data of each nonrespondent.

For the nonresponding units that are new to the survey, imputation is based on other sources of information such as the employment intention of the unit, the characteristics of the responding units in the same industry group, province and size.

**Estimates**

The basic "building block" for producing the monthly estimates is the three-digit industry, province and size group. Estimates at higher levels are obtained by the aggregation of the above estimates. Estimates of averages are obtained by first estimating the totals for the numerator and the denominator at the desired level and then calculating the ratio. Estimates for certain sub-

**Vérification des données et correction**

Au départ, les interviewers des bureaux régionaux de Statistique Canada s'assurent que tous les questionnaires sont complets. Ultérieurement, le personnel du bureau d'Ottawa vérifie par ordinateur l'exactitude et la cohérence des chiffres déclarés. À chacune de ces deux étapes de vérification, un répondant peut donc être prié de confirmer ou d'expliquer ses chiffres.

Nos procédés de vérification nous permettent de comparer les valeurs de certaines caractéristiques (nombre de salariés, heures de travail, gains par salarié, etc.) déclarées par la même unité plusieurs mois de suite. Ainsi, il est possible de déceler les grandes variations ou les erreurs, s'il en est. Chaque fois qu'une forte variation apparaît ou que les données semblent incohérentes, l'ordinateur signale le cas, et l'enregistrement est aussitôt corrigé s'il comporte effectivement une erreur.

**Méthode de suivi**

Le personnel des bureaux régionaux de Statistique Canada relance par téléphone les unités déclarantes qui tardent à répondre au questionnaire. Cette méthode de suivi s'adresse en priorité (i) aux unités qui font partie de l'échantillon pour la première fois et qui n'ont pas encore répondu; (ii) aux unités qui accusent un retard de deux mois consécutifs; (iii) aux grandes unités non répondantes. Pour déterminer l'ordre de priorité des suivis, on tient compte des taux de réponse et du volume de l'emploi dans les différents groupes industriels.

Lorsque des unités persistent à ne pas répondre même après le suivi, des données leurs sont imputées. Tous les enregistrements dont les données découlent d'une imputation sont soumis aux vérifications mentionnées ci-dessus.

**Imputation**

L'imputation de données aux unités non répondantes comprises dans le champ de l'enquête depuis plus d'un mois est basée sur le ratio des variations mensuelles de ces unités. Le ratio de la variation mensuelle d'une caractéristique se calcule à partir des unités qui ont répondu pour le mois courant et le mois précédent, et s'applique aux données du mois précédent de chaque unité non répondante.

Dans le cas des unités non répondantes qui figurent dans l'enquête pour la première fois, l'imputation se fonde sur d'autres sources d'information telles que les prévisions d'emploi de l'unité et les caractéristiques des unités déclarantes du même groupe industriel, de la même province et de la même taille.

**Estimations**

L'élément de base qui sert à établir les estimations est l'industrie (code à trois chiffres), la province et la taille. Les estimations plus agrégatives sont obtenues par la sommation des estimations susdites. Pour calculer les moyennes, on estime d'abord les totaux du numérateur et ceux du dénominateur, au niveau désiré, puis on en fixe le ratio. Nous produisons aussi des estimations concernant certaines régions infraprovinciales, con-

provincial areas are also produced, treating the sub-province as a domain. Coefficients of variation for estimates of some key characteristics at all levels are also produced.

Provision has also been made in the estimation procedure to change the weights of "unusually large" observations occurring in size groups 1, 2 and 3. These observations are termed "outliers" and are judged not to be representative of other units in that size group. The weights of the remaining units are adjusted accordingly.

**Reliability of the estimates**

There are two types of errors possible in estimates based on a sample survey: sampling and non-sampling.

**Sampling errors** occur because observations are made only on a sample rather than on the entire universe. Estimates based on a sample differ from the figures that would have been obtained if a complete census had been taken using the same questionnaires, instructions, interviewers and processing techniques. This difference with respect to a particular estimate is called the sampling error of the estimate.

**Non-sampling errors** are errors which are not related to sampling and may occur in a survey operation for many reasons. Non-response, coverage and classification errors, differences in the interpretation of the questions, incorrect information from respondents, mistakes in recording, coding and processing of data are examples of non-sampling errors. It should be noted that non-sampling errors also occur in complete censuses. In the Survey of Employment, Payrolls and Hours, efforts to reduce non-sampling errors include careful design of questionnaires, editing of data, follow-up of and imputation for non-respondents and thorough control of processing operations.

**Indicators of sampling error**

The sampling error, as described above, is not known. However, it can be estimated from the sample itself by using a statistical measure called the **standard error** of a survey estimate. When the standard error is expressed as a percent of the estimate, it is known as the relative standard error or coefficient of variation.

Alphabetic symbols of the coefficient of variation are used in this publication (see Tables A to F at the end of this explanatory note) to give an indication of the reliability of the estimates and are based on a 12-month average of the coefficients of variation. The ranges of the coefficients of variation and their corresponding alphabetic indicator are given in the following table.

sidérant chacune de ces régions comme un domaine. Enfin, nous calculons des coefficients de variation pour les estimations de certaines caractéristiques clés, à tous les niveaux.

Le procédé d'estimation comporte en outre des mécanismes qui permettent de changer les poids lorsque des observations "exceptionnellement grandes" apparaissent chez les unités des groupes de taille 1, 2 ou 3. Ces observations, dites "aberrantes", ne sont pas représentatives des autres unités du même groupe de taille, de sorte que l'on rajuste les poids des autres unités en conséquence.

**Fiabilité des estimations**

En ce qui concerne les estimations basées sur un sondage, il existe deux types d'erreurs possibles, soit les erreurs d'échantillonnage et les erreurs non liées à l'échantillonnage.

Les **erreurs d'échantillonnage** proviennent de ce que les observations se font à partir d'un échantillon au lieu de l'univers complet. Les estimations basées sur un échantillon diffèrent des statistiques que l'on obtiendrait d'un recensement complet effectué au moyen des mêmes questionnaires, des mêmes directives, des mêmes interviewers et des mêmes techniques de traitement. Cette différence, lorsqu'il s'agit d'une estimation particulière, s'appelle erreur d'échantillonnage de l'estimation.

Les **erreurs non dues à l'échantillonnage** ne se rattachent pas à l'échantillon et peuvent se produire tout au long d'une enquête pour plusieurs raisons. Les cas de non-réponse, les anomalies de couverture et de classification, les différences d'interprétation des questions, la communication de renseignements inexacts par les répondants et les fautes d'entrée, de codage et de traitement des données sont autant d'erreurs non attribuables à l'échantillonnage. Il faut noter que des erreurs de ce genre peuvent aussi se produire dans les recensements. Pour l'enquête sur l'emploi, la rémunération et les heures de travail, nous avons tenté d'en réduire le risque par une formulation soignée des questionnaires, par une vérification rigoureuse des chiffres déclarés, par le travail de suivi, par l'imputation de données aux unités non répondantes et par un contrôle attentif des techniques de traitement.

**Indicateurs des erreurs d'échantillonnage**

L'erreur d'échantillonnage que nous venons de décrire reste inconnue. On peut cependant l'estimer à partir de l'échantillon, en utilisant une mesure appelée **écart-type** d'une estimation de sondage. Lorsque l'écart-type est exprimé en pourcentage de l'estimation, on l'appelle écart-type relatif ou coefficient de variation.

Dans la présente publication, nous utilisons des symboles littéraux de coefficient de variation (voir tableaux A à F à la fin de cette note explicative), pour indiquer le degré de fiabilité des estimations; cette symbolisation repose sur la moyenne des coefficients de variation de 12 mois. Les intervalles de confiance des coefficients de variation et les symboles correspondants sont précisés dans le tableau suivant.

**ALPHABETIC INDICATORS OF COEFFICIENT OF VARIATION**

| Alphabetic Indicator | Range of Coefficient of Variation Percent |
|---|---|
| A | 0 - 1.0 |
| B | 1.1 - 2.5 |
| C | 2.6 - 5.0 |
| D | 5.1 - 10.0 |
| E | 10.1 - 15.0 |
| F | 15.1 - 25.0 |
| G | > 25.0 |

The sample estimate and its standard error (derived from the coefficient of variation) may be used to construct an interval within which the unknown census value is expected to be contained with a prescribed confidence. The particular sample used in this survey is one of a large number of all possible samples of the same size that could have been selected using the same sample design. Estimates derived from the different samples would differ from each other. If intervals from two standard errors below the estimate to two standard errors above the estimate are constructed using each of the above estimates, then approximately 19 out of 20 of the intervals would include the census value. Such an interval is called a 95 percent confidence interval. For example, let the estimate under consideration be the total number of paid employees at Canada level in Construction and say it is 450,000 employees. If the estimate has a reliability indicator A, then assuming that the coefficient of variation of the estimate is 1%, the standard error of the estimate would be 4,500 employees. Therefore, in this case, one can say with 95% confidence that the census value of total paid employees in Construction is included in the interval 441,000 to 459,000 employees.

In general, the estimates of monthly changes are expected to be more reliable than the estimates of levels due to the large overlap of reporting units in the monthly samples and the high correlation between the reported values for two consecutive months.

**INDICATEURS LITTÉRAUX DU COEFFICIENT DE VARIATION**

| Indicateur littéral | Intervalle de confiance du coefficient de variation en pourcentage |
|---|---|
| A | 0 - 1.0 |
| B | 1.1 - 2.5 |
| C | 2.6 - 5.0 |
| D | 5.1 - 10.0 |
| E | 10.1 - 15.0 |
| F | 15.1 - 25.0 |
| G | > 25.0 |

L'estimation de l'échantillon et son écart-type (établi d'après le coefficient de variation) peuvent servir à construire un intervalle à l'intérieur duquel s'inscrira, sous réserve d'une limite de confiance prédéterminée, la valeur inconnue que l'on obtiendrait par recensement. L'échantillon sur lequel s'appuie notre enquête n'est qu'un des multiples fragments de même taille que nous aurions pu choisir en utilisant le même plan. Les estimations tirées d'autres échantillons du même univers différeraient les unes des autres. Si l'on construisait des intervalles allant de deux écarts-types sous l'estimation à deux écarts-types au-dessus de l'estimation, en utilisant chacune des estimations possibles (selon l'échantillon choisi), environ 19 intervalles sur 20 contiendraient alors la valeur que donnerait un recensement. Ce genre d'intervalle se nomme intervalle de confiance à 95%. Prenons par exemple comme estimation le nombre total de salariés de la construction pour l'ensemble du Canada, et supposons que ce nombre soit 450,000. Si l'indicateur de fiabilité de cette estimation est A, et si son coefficient de variation s'établit à 1%, alors l'écart-type de l'estimation sera de 4,500 salariés. Dans ce cas, on peut donc dire avec 95% de confiance que le nombre total de salariés de la construction, obtenu par recensement, se situe dans l'intervalle 441,000 à 459,000 salariés.

En général, on s'attend à ce que les estimations des variations mensuelles soient plus fiables que les estimations de niveaux, par suite de l'ample chevauchement des unités déclarantes au sein des échantillons mensuels, et de la forte corrélation qui existe entre les valeurs déclarées pour deux mois consécutifs.

## Statistical Presentation

### 1. Data Revision

Each month, statistics for the two latest months are prepared from the survey of Employment, Payrolls and Hours. Data for the most current month are titled **preliminary** estimates and are based on a response rate of around 80%. Estimates are also prepared for the month immediately preceding the

## Présentation statistique

### 1. Révision des données

Chaque mois, nous préparons, à l'égard des deux derniers mois, des statistiques tirées de l'enquête sur l'emploi, la rémunération et les heures de travail. Les données du mois le plus récent sont appelées estimations **préliminaires** et se fondent sur un taux de réponse d'environ 80%. Nous établissons également des estimations pour le mois qui

most current month; these are known as **revised** estimates and are based on a higher rate of response (approximately 90%).

2. **Data Release**

As soon as the estimates become available, selected highly aggregated statistics are released in the Statistics Canada Daily, while detailed data are entered in the Canadian Socio-Economic Information Management System (i.e. CANSIM).

Detailed estimates appear in this report at a later date.

3. **Rounding**

Totals and averages for any level of geographical or industrial aggregation are calculated using unrounded figures and then rounded using the usual procedure adopted by Statistics Canada. Published employment figures are rounded to hundreds. The sum of individually rounded items may not always equal the total.

4. **Averages**

The average weekly earnings (including overtime) is obtained by dividing the total weekly payrolls by the number of employees. It is calculated for the total number of employees, for the hourly-rated employees, for the salaried employees, and for the other types of employees.

The average weekly overtime earnings is derived by dividing the overtime weekly payrolls by the number of employees. It is calculated for the total number of employees, the hourly-rated employees and the salaried employees.

The average hourly earnings (including overtime) is obtained by dividing the total weekly payrolls by the total weekly number of hours (the total weekly number of hours is reported for the hourly-rated employees while, for salaried employees, it is derived by multiplying the average standard workweek hours by the number of salaried employees). It is calculated for the hourly-rated employees and for the salaried employees.

The average hourly overtime earnings is calculated for the hourly-rated employees by dividing the overtime weekly payrolls by the weekly number of overtime hours reported for this group of employees.

The average weekly hours (including overtime) is obtained by dividing the total weekly number of hours by the number of employees. This statistic is calculated for the hourly-rated employees and the salaried employees.

précède le mois le plus récent; il s'agit d'estimations **révisées** qui prennent appui sur un taux de réponse plus élevé (environ 90%).

2. **Diffusion des données**

Dès que les estimations requises sont disponibles, des statistiques choisies à un niveau d'aggrégation élevé paraissent dans le Quotidien de Statistique Canada, tandis que les chiffres détaillés sont introduits dans le Système canadien d'information socio-économique (CANSIM).

Les estimations détaillées apparaissent dans ce bulletin plus tard.

3. **Arrondissement**

Les totaux et les moyennes des divers niveaux d'agrégation géographique ou industrielle sont calculés au moyen des chiffres bruts, ensuite arrondis conformément à la méthode d'arrondissement habituelle de Statistique Canada. Les nombres publiés concernant l'emploi sont arrondis à la centaine. Par conséquent, il peut arriver que la somme des chiffres arrondis individuellement ne corresponde pas au total.

4. **Moyennes**

On obtient les rémunérations hebdomadaires moyennes (y compris celles du temps supplémentaire) en divisant les rémunérations hebdomadaires totales par le nombre de salariés. Ces moyennes sont calculées à l'égard du nombre total de salariés, de salariés rémunérés à l'heure, d'employés et des autres catégories de salariés.

Pour obtenir les rémunérations hebdomadaires moyennes du temps supplémentaire, on divise les rémunérations hebdomadaires pour le temps supplémentaire par le nombre de salariés. Ces moyennes sont calculées à l'égard du nombre total de salariés, de salariés rémunérés à l'heure et d'employés.

On obtient les gains horaires moyens (y compris la rémunération pour le temps supplémentaire) en divisant les rémunérations hebdomadaires totales par le nombre total hebdomadaire d'heures travaillées (le nombre total d'heures hebdomadaires est celui déclaré pour les salariés rémunérés à l'heure, tandis que dans le cas des employés on l'établit en multipliant la moyenne des heures fournies pendant la semaine normale de travail par le nombre d'employés). Nous calculons cette statistique à l'égard des salariés rémunérés à l'heure et des employés.

Quant au temps supplémentaire, on calcule les gains horaires moyens des salariés rémunérés à l'heure en divisant les rémunérations hebdomadaires pour le temps supplémentaire par le nombre d'heures supplémentaires hebdomadaires déclarées pour ce groupe de salariés.

Pour déterminer les heures hebdomadaires moyennes (y compris les heures supplémentaires) on divise le total des heures hebdomadaires par le nombre de salariés. Cette statistique est établie à l'égard des salariés rémunérés à l'heure ainsi qu'à l'égard des employés.

The average weekly overtime hours is derived by dividing the weekly number of overtime hours by the number of employees. This average is calculated for the hourly-rated employees.

The average weekly earnings (excluding overtime) is obtained by dividing the weekly payrolls, which exclude the overtime weekly payrolls, by the number of employees. This estimate is calculated for hourly-rated employees and salaried employees.

5. **Unpublished Data**

A large number of non-confidential detailed industrial and geographic estimates are compiled but not included in this report. Although the reliability of these estimates is lower than the reliability of the published estimates, these data will be available on request on a cost recovery basis.

In addition to the total number of employees for the education industry, data are also available for the teaching and non-teaching staff separately.

6. **CANSIM**

Some of the data published in this report are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System).

Tables giving the CANSIM matrix numbers, the CANSIM series numbers and the types of survey estimates are presented at the end of this explanatory text (see Tables I to V) to provide the user with an easy and quick link to the CANSIM system.

Generally speaking, the CANSIM matrix number identifies a type of survey estimates for a particular geographic area, while the CANSIM series number represents an industrial level. Owing to the different types of data aggregations (all units, take-all units, take-some units) and to the large number of survey estimate types (number of employees, average hourly earnings of hourly-rated employees, etc.), the user will have to follow the steps given hereafter to select the proper CANSIM matrix and series numbers.

a) Determine the type of tabulated information needed (this will define the value of "x" for the CANSIM series number of Table II):

   i) Aggregation of all survey units has the value 1,

   ii) Aggregation of take-all units has the value 2 and

   iii) Aggregation of take-some units has the value 3.

Pour calculer les heures supplémentaires moyennes hebdomadaires on divise le nombre d'heures supplémentaires hebdomadaires par le nombre de salariés.

La moyenne des rémunérations hebdomadaires (temps supplémentaire exclu) s'obtient en divisant les rémunérations hebdomadaires, qui excluent les rémunérations hebdomadaires pour le temps supplémentaire, par le nombre de salariés. Cette estimation est calculée à l'égard des salariés rémunérés à l'heure, de même qu'à l'égard des employés.

5. **Données non publiées**

Nous établissons, aux niveaux industriel et géographique, un grand nombre d'estimations non confidentielles détaillées qui, toutefois, ne figurent pas dans le présent ouvrage. Bien que leur fiabilité soit plus faible que celle des estimations publiées, ces données peuvent être obtenues sur demande sur une base de recouvrement des coûts.

Outre le chiffre total des salariés du domaine de l'éducation, nous pouvons aussi fournir des données distinctes concernant le personnel enseignant et le personnel non enseignant.

6. **CANSIM**

Certaines données qui apparaissent dans la présente publication sont également disponibles sous une forme ordinolingue dans CANSIM (Système canadien d'information socio-économique).

Les intéressés trouveront à la fin de ces notes explicatives des tableaux indiquant les numéros des matrices CANSIM, les numéros des séries CANSIM et les types d'estimations de l'enquête (voir tableaux I à V). Ces tableaux fournissent à l'utilisateur un moyen d'accès facile et rapide au système CANSIM.

De façon générale, le numéro de matrice CANSIM désigne un type d'estimation de l'enquête pour une région géographique particulière, tandis qu'un numéro de série CANSIM désigne un niveau industriel. En raison de la multiplicité des types d'agrégation (ensemble des unités, unités à tirage complet, unités à tirage partiel) et des nombreux types d'estimations de l'enquête (nombre de salariés, salaires horaires moyens des salariés rémunérés à l'heure, etc.), l'utilisateur devra franchir les étapes suivantes pour choisir les bons numéros de matrice et de série CANSIM.

a) Déterminer le type désiré de totalisation parmi les cas suivants (cette opération définira la valeur de "x" pour le numéro de série CANSIM au tableau II):

   i) ensemble des unités de l'enquête: vaut 1,

   ii) unités à tirage complet: vaut 2 et

   iii) unités à tirage partiel: vaut 3.

b) Determine the type of survey estimates required; this will provide the value of "y" for the CANSIM series number. This value is obtained by consulting Table I which lists the 19 types of survey estimates; the number of salaried employees, for example, constitutes type 2.

c) Determine the industrial level needed and refer to the Industry Code column of the CANSIM series number Table II to find the rest of the series number (e.g. Industry Code 031 has series number **x.y.1.1.1.1).**

d) Determine the geographical level required and refer to the CANSIM matrix number tables (Tables III to V) to select the appropriate matrix number.

A specific example would be as follows. The "average weekly earnings (including overtime) of all employees" for "all survey units" is needed for the Ontario total manufacturing. The CANSIM series number will be 1.5.1.1.3 according to:

i) The "x" value of 1 for the "All survey units" aggregation,

ii) The "y" value of 5 for the type of survey estimates and

iii) The tail-end of the series number 1.1.3 for the manufacturing Industry Code 101-399.

The CANSIM matrix number will be 8367 because the type of estimates 5 is required for Ontario.

It should be noted that only two types of survey estimates are available for the Census Agglomerations and Census Metropolitan Areas (i.e. estimates 01: total number of employees, and 05: average weekly earnings (including overtime) of all employees), while nineteen types of estimates are available for Canada and the provinces.

For further information on CANSIM call (613) 991-1150 or write CANSIM Division, Statistics Canada, R.H. Coats BLDG., Ottawa, Ontario, K1A 0T6.

## 7. Confidentiality

The information presented in this publication has been reviewed to ensure that the confidentiality of individual responses is respected.

b) Déterminer le type requis d'estimations de l'enquête; cette opération fixera la valeur de "y" pour le numéro de série CANSIM. On obtient cette valeur en consultant le tableau I, qui contient la liste des 19 types d'estimations de l'enquête; le type "employés", par exemple, a la valeur 2.

c) Déterminer le niveau industriel désiré et utiliser la colonne "code des industries" du tableau II des numéros de série CANSIM pour trouver les autres chiffres du numéro de série (par ex. le code d'industrie 031 possède le numéro de série **x.y.1.1.1.1).**

d) Déterminer le niveau géographique requis et utiliser les tableaux de numéros de matrice CANSIM (Tableaux III à V) pour choisir le numéro de matrice approprié.

Voici un exemple. Supposons que l'on veuille connaître la "rémunération hebdomadaire moyenne (incluant le temps supplémentaire) de l'ensemble des salariés" de "l'ensemble des unités de l'enquête" pour les manufactures de l'Ontario. Le numéro de série CANSIM sera 1.5.1.1.3, puisque:

i) la valeur de "x" pour le groupe "ensemble des unités de l'enquête" est 1,

ii) la valeur de "y" pour le type d'estimation est 5, et

iii) la fin du numéro de série pour le "code d'industrie" des manufactures 101-399 est 1.1.3.

Le numéro de matrice CANSIM sera 8367, car le type d'estimation 5 s'applique à l'Ontario.

Notons qu'il n'existe que deux types d'estimations au niveau des agglomérations de recensement et des régions métropolitaines (i.e.) les estimations 01: nombre total des salariés, et 05: salaires hebdomadaires moyens (y compris le surtemps) pour l'ensemble des salariés), alors qu'il y a dix-neuf types d'estimations disponibles aux niveaux du Canada et des provinces.

Pour de plus amples informations concernant CANSIM, téléphoner à (613) 991-1150 ou écrire à Division CANSIM, Statistique Canada, immeuble R.H. Coats, Ottawa, Ontario, K1A 0T6.

## 7. Confidentialité

Les données du présent bulletin sont vérifiées afin de s'assurer qu'elles respectent le caractère confidentiel des réponses fournies par les entreprises.

CANSIM Matrix and Series Reference Numbers

Numéros de référence des matrices et séries CANSIM

**TABLE I. Type of Estimates**

**TABLEAU I. Type d'estimations**

| Estimates<br>Estimations | Description |
|---|---|
| 1 | All employees - Ensemble des salariés |
| 2 | Salaried employees - Employés |
| 3 | Employees paid by the hour - Salariés rémunérés à l'heure |
| 4 | Other employees - Autres salariés |
| 5 | Average weekly earnings (including overtime) of all employees - Rémunération hebdomadaire moyenne (incluant le temps supplémentaire) de l'ensemble des salariés |
| 6 | Average weekly earnings (including overtime) of salaried employees - Rémunération hebdomadaire moyenne (incluant le temps supplémentaire) des employés |
| 7 | Average weekly earnings (including overtime) of employees paid by the hour - Rémunération hebdomadaire moyenne (incluant le temps supplémentaire) des salariés rémunérés à l'heure |
| 8 | Average weekly earnings (including overtime) of other employees - Rémunération hebdomadaire moyenne (incluant le temps supplémentaire) des autres salariés |
| 9 | Average weekly earnings (excluding overtime) of all employees - Rémunération hebdomadaire moyenne (excluant le temps supplémentaire) de l'ensemble des salariés |
| 10 | Average weekly earnings (excluding overtime) of salaried employees - Rémunération hebdomadaire moyenne (excluant le temps supplémentaire) des employés |
| 11 | Average weekly earnings (excluding overtime) of employees paid by the hour - Rémunération hebdomadaire moyenne (excluant le temps supplémentaire) des salariés rémunérés à l'heure |
| 12 | Average weekly overtime earnings of all employees - Rémunération hebdomadaire moyenne pour travail supplémentaire, ensemble des salariés |
| 13 | Average weekly overtime earnings of salaried employees - Rémunération hebdomadaire moyenne pour travail supplémentaire, des employés |
| 14 | Average weekly overtime earnings of employees paid by the hour - Rémunération hebdomadaire moyenne pour travail supplémentaire des salariés rémunérés à l'heure |
| 15 | Average weekly hours of salaried employees - Heures hebdomadaires moyennes des employés |
| 16 | Average weekly hours of employees paid by the hour - Heures hebdomadaires moyennes des salariés rémunérés à l'heure |
| 17 | Average weekly overtime hours of employees paid by the hour - Heures supplémentaires hebdomadaires moyennes des salariés rémunérés à l'heure |
| 19 | Average hourly earnings (including overtime) of employees paid by the hour - Rémunération horaire moyenne (incluant le temps supplémentaire) des salariés rémunérés à l'heure |
| 20 | Average hourly overtime earnings of employees paid by the hour - Rémunération horaire moyenne du travail supplémentaire, des salariés rémunérés à l'heure |

Mai 1987

Statistics Canada Statistique Canada

## Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

## How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Employment, earnings and hours,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 991-4090) or to the Statistics Canada reference centre in:

| | | | |
|---|---|---|---|
| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |
| Halifax | (426-5331) | Winnipeg | (983-4020) |
| Montréal | (283-5725) | Regina | (780-5405) |
| Ottawa | (990-8116) | Edmonton | (420-3027) |
| Toronto | (973-6586) | Vancouver | (666-3691) |

Toll-free access is provided in all provinces and territories, **for users who reside outside the local dialing area** of any of the regional reference centres.

## Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

## Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Emploi, gains et durée du travail,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 991-4090) ou au centre de consultation de Statistique Canada à:

| | | | |
|---|---|---|---|
| St. John's | (772-4073) | Sturgeon Falls | (753-4888) |
| Halifax | (426-5331) | Winnipeg | (983-4020) |
| Montréal | (283-5725) | Regina | (780-5405) |
| Ottawa | (990-8116) | Edmonton | (420-3027) |
| Toronto | (973-6586) | Vancouver | (666-3691) |

Un service d'appel interurbain sans frais est offert, dans toutes les provinces et dans les territoires, **aux utilisateurs qui habitent à l'extérieur des zones de communication locale** des centres régionaux de consultation.

## CATALOGUING INSTRUCTIONS

Revised data for the months of January, February, March and April 1987 are presented in the MAY 1987 issue of Employment, Earnings and Hours.

The data contained in the February, March and April 1987 issues of Catalogue 72-002 are no longer valid and should be replaced by this issue. The January 1987 issue, however, should be retained as it contains data for the month of December 1986.

Users requiring further information on the above revisions should consult the explanatory notes contained in this catalogue (May 1987) or contact the Labour Division at (613) 991-4090.

## AUX ABONNÉS DE:

## DIRECTIVE DE CLASSEMENT

Les données révisées pour les mois de janvier, février, mars et avril 1987 sont publiées dans le numéro de MAI 1987, Emploi, gains et durée du travail.

Les données présentées antérieurement dans les éditions de février, mars et avril 1987 ne sont plus valides et devraient être remplacés par l'édition de mai 1987. Le numéro de janvier, par contre, devrait être conservé car il contient les données de décembre 1986.

Les utilisateurs qui ont besoin de plus de renseignements à propos de ces révisions devraient consulter les notes explicatives dans ce numéro de mai 1987 ou ils peuvent contacter la Division du travail à (613) 991-4090.

## Symbols

The following standard symbols are used in Statistics Canada publications:

.. figures not available.

... figures not appropriate or not applicable.

- nil or zero.

-- amount too small to be expressed.

p preliminary figures.

r revised figures.

x confidential to meet secrecy requirements of the Statistics Act.

### Note on CANSIM

Some of the data published in Employment, Earnings and Hours (Catalogue 72-002) are also available in machine readable form through CANSIM (Canadian Socio-Economic Information Management System). In general, CANSIM provides a longer historical series. Data for urban areas are also available on CANSIM. Users interested in accessing data via CANSIM should contact one of Statistics Canada's regional centres at the numbers listed on the inside front cover of this publication or contact CANSIM directly at (613)991-1150.

## Signes conventionnels

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

.. nombres indisponibles.

... n'ayant pas lieu de figurer.

- néant ou zéro.

-- nombres infimes.

p nombres provisoires.

r nombres rectifiés.

x confidentiel en vertu des dispositions de la Loi sur la statistique relatives au secret.

### Note concernant CANSIM

Quelques données publiées dans l'Emploi, gains et durée du travail (n$^{o}$ 72-002 au catalogue) peuvent être obtenues sous forme lisible par machine de CANSIM (Système Canadien d'information socio-économique). Les séries historiques sont généralement plus longues sur CANSIM. Les données pour les régions urbaines sont aussi disponibles sur CANSIM. Les utilisateurs voulant obtenir des chiffres par l'intermédiaire de CANSIM doivent contacter un des centres de consultation de Statistique Canada dont les numéros de téléphone se trouvent à l'endos du couvert de cette publication ou en communiquant directement avec CANSIM au (613)991-1150.

## HIGHLIGHTS

## FAITS SAILLANTS

### Note to Users Regarding Data Revisions

Changes to the survey of Employment, Payrolls and Hours (SEPH) sampling frame were phased-in over a four-month period beginning with January 1987. Major changes included improvements to the coverage of firms in the survey sampling frame and a re-assignment of some establishments to more appropriate industry, geographic and/or employment size categories. Revised sampling fractions were also implemented in a number of areas to improve the efficiency of the sample. These changes were designed to improve the accuracy and reliability of the estimates and were expected to result in higher estimates of employment. The phase-in over the four months, however, affected the month-to-month comparability of the published estimates over this period.

The April 1987 data reflect the full impact of the sampling frame changes. Data for the months of January, February and March 1987 have been revised from previously published information to remove the impact of the phase-in and provide data for the first four months of 1987 on a consistent basis. The revised data are presented in the accompanying tables.

Although only the 1987 estimates have been revised, adjustments to SEPH data for the previous years will be required when making comparisons with the revised 1987 estimates. Adjustment factors needed to make such comparisons and explanations on their use will be published in this issue. The factors are also available on request from the Labour Division (613-991-4090).

Please note that these adjustment factors have been used to remove the estimated impact of the sampling frame changes from all year-over-year comparisons referred to in the accompanying text.

### Révisions aux données

Les modifications apportées à la base de sondage de l'enquête sur l'emploi, la rémunération et les heures de travail (EERH) ont été incorporées au cours d'une période de quatre mois à compter du mois de référence de janvier 1987. Les principales modifications comprennent des améliorations au champ d'observation des entreprises dans la base de sondage de l'enquête, la réaffectation de certains établissements à des catégories plus appropriées au niveau de l'activité économique, du lieu géographique ou de la taille de l'emploi et des révisions aux fractions de sondage dans un certain nombre de domaines. Ces modifications sont destinées à améliorer la précision et la fiabilité des estimations. Il est anticipé que ces changements mèneront à des estimations d'emploi plus élevés. La mise en oeuvre des modifications au cours de ces quatre mois a cependant affecté la comparabilité d'un mois à l'autre des estimations publiées pendant cette période.

Les données pour avril 1987 prennent en compte l'intégralité de ces modifications à la base de sondage. Les données pour janvier, février et mars 1987 ont été révisées par rapport aux estimations déjà publiées afin d'éliminer les conséquences de la mise en oeuvre des modifications et de présenter les données pour les quatre premiers mois de 1987 sur une base cohérente. Ces données revisées se trouvent dans les tableaux ci-joints.

Même si les données de 1987 ont seules fait l'objet d'une révision, il faut corriger les données de l'EERH des années antérieures lorsque l'on procède à des comparaisons avec les estimations révisées de 1987. Les facteurs d'ajustement nécessaires pour effectuer ces comparaisons et les explications pour leur emploi sont publiés dans ce numéro. Les facteurs sont aussi disponibles sur demande auprès de la Division du travail (613-991-4090).

Les lecteurs sont priés de noter que ces facteurs d'ajustement ont servi à éliminer l'impact estimatif des modifications à la base de sondage de toutes les comparaisons d'une année à l'autre mentionnées dans le texte ci-joint.

### Preliminary Estimates[1] (Data not seasonally adjusted) - May 1987

Preliminary data for May 1987 showed an estimated 9,892,000 employees at the Canada industrial aggregate level[2], an increase of 96,000 ( + 1.0%) from the previous month (not adjusted for seasonal variation). This represents a smaller than usual increase in employment for this time of year. Compared to May 1986, industrial aggregate employment increased by 1.1% (after adjustment for sampling frame changes - see accompanying note).

### Estimations préliminaires[1] (données non désaisonnalisées) - mai 1987

Selon les données préliminaires non désaisonnalisées, le nombre de salariés pour l'ensemble des activités économiques[2] au Canada a atteint 9,892,000 en mai 1987, en hausse de 96,000 ( + 1.0%) par rapport au mois précédent. Ceci représente une augmentation plus faible que celle habituellement observée pour cette période de l'année. Par rapport à mai 1986, le nombre de salariés pour l'ensemble des activités économiques a augmenté de 1.1% (après ajustements faits à la base de sondage - voir note ci-jointe).

Average weekly earnings for all employees were estimated at $440.24 for May, little changed from April and 3.5% above the level of May 1986 (adjusted for sampling frame changes).

## Employment

Estimated employment in May in the goods-producing industries was 2.5% higher than in April, a smaller than usual increase for this time of year. Employment estimates increased less than usual in forestry and manufacturing. The number of employees in the service-producing industries rose by only 0.5% between April and May. Employment increased less than usual for this time of year in trade and community, business and personal services while it increased more than usual in finance, insurance and real estate.

The total number of employees at the Canada industrial aggregate level increased by an estimated 108,000 ( + 1.1%) from May 1986. The year-to-year growth rates were the lowest of 1987 in both the goods-producing and service-producing industries. Among the industries contributing to lower annual rates of change were forestry, manufacturing, trade and community, business and personal services. Finance, insurance and real estate showed the highest year-to-year growth rate since May 1985.

At the provincial level, estimated employment increased less than usual between April and May in Nova Scotia, New Brunswick, Québec, Ontario and British Columbia. All provinces except Newfoundland, Saskatchewan and Alberta showed lower year-to-year growth rates in May than in the previous four months.

## Earnings

Average weekly ernings for all employees in the goods-producing industries remained virtually unchanged between April and May 1987. Average weekly earnings increased in construction at a time of year when a decrease is usually observed. In the service-producing industries, average weekly earnings were little changed from April.

Compared to May 1986, total average weekly earnings increased by 3.5%, the highest yearly growth rate since February of last year. Average weekly earnings in the goods-producing industries rose by 5.3% from a year earlier. The year-to-year growth rates were the highest of 1987 in mines, quarries and oil wells, manufacturing and construction. The year-to-year growth rate in the service-producing industries was 2.9%. The yearly growth rate in trade was the lowest since the introduction of the

En mai 1987, la rémunération hebdomadaire moyenne pour l'ensemble des salariés était estimée à $440.24, soit peu changée par rapport à avril et 3.5% supérieure à celle du mois de mai 1986 (ajustée pour changements faits à la base de sondage).

## Emploi

En mai 1987, l'estimation du nombre de salariés de la branche productrice de biens était 2.5% supérieure à celle d'avril, montrant ainsi une augmentation plus faible qu'à l'ordinaire pour cette période de l'année. Les industries des forêts et des manufactures ont enregistrés des augmentations plus faibles que d'habitude. Le nombre de salariés de la branche productrice de services a augmenté légèrement de 0.5% entre avril et mai. Le nombre estimatif de salariés dans le commerce et les services socio-culturels, communautaires et personnels a montré une augmentation plus faible qu'à l'ordinaire entre avril et mai. Les finances, assurances et affaires immobilières ont enregistré une augmentation plus forte que d'habitude pour ce temps de l'année.

En regard de mai 1986, l'estimation du nombre de salariés au niveau de l'ensemble des activités économiques au Canada montrait une augmentation de 108,000 ( + 1.1%). Les taux de croissance annuels dans les branches productrices de biens et de services étaient à leur plus bas niveaux pour 1987. Parmi les industries contribuant aux taux de changements annuels plus bas, notons les forêts, les manufactures, le commerce et les services socio-culturels, communautaires et personnels. Les finances, assurances et affaires immobilières ont enregistré leur plus haut taux de croissance annuel depuis mai 1985.

Au niveau provincial, des augmentations plus faibles qu'à l'ordinaire ont été observées dans l'emploi estimatif entre avril et mai en Nouvelle-Écosse, au Nouveau-Brunswick, au Québec, en Ontario et en Colombie-Britannique. Toutes les provinces à l'exception de Terre-Neuve, de la Saskatchewan et de l'Alberta ont démontré un taux de croissance annuel plus bas en mai que pour les quatre premiers mois de l'année.

## Rémunération

La rémunération hebdomadaire moyenne pour l'ensemble des salariés dans la branche productrice de biens est demeurée inchangée entre avril et mai. La rémunération hebdomadaire moyenne a augmenté dans la construction à un temps de l'année où une diminution est habituellement observée. Dans la branche productrice de services, la rémunération hebdomadaire moyenne n'a pratiquement pas varié entre avril et mai.

Par rapport à mai 1986, la rémunération hebdomadaire moyenne montrait un taux de croissance annuel de 3.5%, soit son niveau le plus élevé depuis février 1986. La rémunération hebdomadaire moyenne dans la branche productrice de biens augmentait de 5.3% par rapport à mai de l'an dernier. Les taux de croissance annuels étaient à leur plus haut niveau de 1987 dans les mines, carrières et puits de pétrole, dans les manufactures et dans la construction. Le taux de variation annuel pour la branche productrice de services était de 2.9%. Le taux de

survey of Employment, Payrolls and Hours in March 1983. The annual growth rates in transportation, communication and other utilities and in finance, insurance and real estate were the highest in the last 12 months.

At the provincial level, average weekly earnings increased more than usual between April and May in Quebec and decreased in Saskatchewan at a time of year where an increase is usually observed. The yearly rates of change in average weekly earnings were higher in May than in the first four months of the year in New Brunswick, Quebec, Ontario, Alberta and British Columbia.

## Hours and Hourly Earnings

At the Canada industrial aggregate level, the average weekly hours for full-time and part-time employees paid by the hour (who account for approximately 47% of industrial aggregate employment) were estimated at 32.0 hours in May a slight increase from the previous month. Average weekly hours were estimated at 38.9 hours in the goods-producing industries and 28.3 hours in the service-producing industries.

Average hourly earnings of employees paid by the hour, estimated at $11.00 in May 1987, remained virtually unchanged from April. Average hourly earnings in May were estimated at $12.92 in the goods-producing industries and $9.59 in the service-producing industries.

[1] See note on "Statistical presentation" under "Concepts and Methods" at the back of this publication.

[2] The industrial aggregate is the sum of all industries with the exception of agriculture; fishing and trapping; religious organizations; private households and military personnel.

croissance annuel dans le commerce est à son plus bas niveau depuis l'introduction de l'enquête sur l'emploi, la rémunération et les heures de travail en mars 1983. Les taux de variation annuels dans les transports, communications et autres services publics et dans les finances, assurances et affaires immobilières étaient plus hauts que dans les derniers 12 mois.

Au niveau provincial, la rémunération hebdomadaire moyenne a augmenté plus que d'habitude au Québec alors qu'elle a diminué en Saskatchewan à un temps de l'année où une augmentation est habituellement observée. Le taux de variation annuel de la rémunération hebdomadaire moyenne était plus élevé que dans les quatre premiers mois de 1987 au Nouveau-Brunswick, au Québec, en Ontario, en Alberta et en Colombie-Britannique.

## Heures et rémunération horaire

Au niveau de l'ensemble des activités économiques au Canada, les heures hebdomadaires moyennes des salariés à temps plein et à temps partiel rémunérés à l'heure (ceux-ci représentent environ 47% des salariés de l'ensemble des activités économiques) étaient estimées à 32.0 heures en mai 1987, soit une légère augmentation par rapport au mois précédent. Selon les estimations, le nombre d'heures hebdomadaires moyennes atteignait 38.9 heures dans la branche productrice de biens et 28.3 heures dans la branche productrice de services.

En mai 1987, la rémunération horaire moyenne des salariés rémunérés à l'heure était estimée à $11.00, soit peu changée par rapport à avril. Elle était estimée à $12.92 dans la branche productrice de biens et à $9.59 dans la branche productrice de services.

[1] Voir la partie "Présentation statistique" sous la rubrique "concepts et méthodes". à la fin de cette publication.

[2] L'ensemble des activités économiques est la somme de toutes les industries à l'exception de l'agriculture, la pêche et le piégeage, les organismes religieux, les ménages privés et les services de défense.
